**METAL SHELLS
AND PLASTIC ENCLOSURES**

IEK GROUP is an international manufacturer and supplier of electrical and lighting equipment. Among the basic activities of IEK GROUP, which provide the company with a strong position in the market, is the production of metal enclosures and plastic boxes under the IEK brand.

Made in Russia!

The vast majority of IEK® metal and plastic enclosures are produced at IEK GROUP's own production facility located in Yasnogorsk, Tula region.

IEK Group is an international manufacturer and supplier of electrical and lighting equipment. IEK R&D develops products suitable for any conditions and meeting the needs of the most demanding consumer. At every stage of production – from raw materials to finished products – IEK GROUP pays special attention to quality control. All products under the IEK® trademark are tested in our own laboratory, as well as in leading testing and certification centers.

Wide Range

In the IEK® product range, you can find almost any enclosure or box required to equip residential, commercial or industrial buildings. Wall-mounted and flush-mounted, for indoor and outdoor applications, distribution and metering – all these types of enclosures and boxes are produced by IEK GROUP.

IEK® enclosures are designed to accommodate a different number of modules – from 2 to 96. In total, the IEK® assortment includes about 150 models of plastic boxes and more than 1000 models of metal cabinets.

Our own production facilities allow us to manufacture a metal or plastic cabinet of any complexity. IEK® enclosures and boxes have a high degree of protection, meet safety requirements, have an attractive ergonomic design and are easy to assemble.

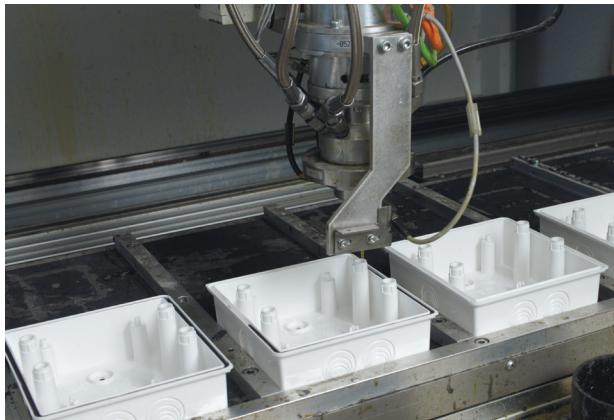

Reliable Protection

Distinctive features of IEK® plastic boxes are high quality, complete set, ease of installation and operation of products. IEK GROUP manufactures plastic boxes taking into account the requirements of the market and the difficult climatic conditions of north countries. According to a study conducted in 2018 by DISCOVERY Research Group (a partner of rbc.ru), IEK® plastic boxes are number 1 in Russia!

IEK® plastic boxes are designed for installation in apartments and country houses, in modern offices, in industrial premises with increased dustiness and moisture content, and even outdoors in the open air – wherever modular enclosures may be required. The highest degree of protection of IEK® enclosures IP66 guarantees the installed equipment absolute protection against dust and strong water jets.

The wide range of accessories for IEK® metal and plastic enclosures ensures quick and easy mounting of electrical equipment as well as ease of use. The IEK® product range includes DIN rails, various electrical busbars, clamps and terminal blocks, as well as glands, climate control equipment and other accessories for electrical cabinets.

Highest precision

In the production of IEK® metal cabinets, high-quality metal is used, and the modern equipment installed at the IEK GROUP enterprise allows achieving the highest precision in cutting raw materials and welding enclosures.

Positioning and punching machines provide accurate cutting and no gaps in the product. Robotic welding makes cabinets not only aesthetically pleasing, but also guaranteed to be safe – all joints are sealed and have perfect geometry. The automatically applied polyurethane sealant guarantees the declared degree of protection for IEK® metal products. And one of the best automated painting lines in Russia creates a reliable anti-corrosion coating.

People Choose Us

IEK® metal enclosures and plastic boxes are used at the largest industrial and infrastructure facilities, in business centers and residential complexes, in hospitals, schools and other social institutions.

Wall-mounting modular plastic distribution enclosures

IP20, IP30, IP31

Wall-mounting modular plastic distribution enclosure, which are distinguished by their modern design and streamlined shapes, will suit any interior. They are installed in residential and office premises.

Advantages

- Made of self-extinguishing polymers.
- Protection from theft of electricity and from unauthorized access to the contact group – the possibility of sealing.
- Simple and quick installation.
- Easy insertion of cables through knock-out holes.
- Possibility to install several enclosures in a row.

Specifications

Installation type	wall-mounted
Degree of protection	IP20, IP30, IP31
Protection class	II
Enclosure material	polystyrene
Door material	polystyrene
Color	white (RAL 9016), pine (RAL 1001), oak (RAL 8024)
Number of rows	1
Number of modules	from 2 to 9
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	100
Operating temperature, °C	-20 ÷ +80
Climatic modification	NF3

KREPTA 3

Wall(flush)-mounting modular plastic distribution enclosures IP41

Used in residential and office premises. Designed for the installation of modular devices: circuit breakers, residual current devices, differential circuit breakers, timers, lighting control devices, etc.

Reliable modern design and durable plastic, convenient fastening devices guarantee the products a long service life and safe operation.

KREPTA

Advantages

- Impact resistant self-extinguishing ABS plastic.
- Simple and quick installation – holes for fixing the enclosure.
- Convenient installation – pre-punched inputs for cable entry from all sides.
- Universal screws to fit any type of screwdriver.
- Special support for N and PE buses made of self-extinguishing plastic at 960°C.
- Increased distance from the DIN rail to the back of the enclosure base.

Specifications

Installation type	wall-mounted, flush-mounted
Degree of protection	IP41
Protection class	II
Enclosure material	ABS
Door material	polystyrene
Enclosure color	white (RAL9016), black (RAL9005), pine
Number of rows	from 1 to 3
Number of modules	from 4 to 36
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	100
Operating temperature, °C	-20÷+80
Climatic modification	NF3
Impact strength	IK05 (0.7 J)

Easy entry of cables, wires through punched-out conductor entries on the rear and side walls of the enclosure.

The vertical arrangement of the enclosure provides ease of installation and additional air circulation.

No need to write on the circuit breakers themselves — a special marking tape is included.

Individual packaging* not only protects the enclosure from mechanical stress, but also informs the consumer about the advantages of IEK® enclosures.

The special support for N and PE busbars can be easily removed and installed in both the upper and lower parts of the enclosure base. The support self-extinguishes at a temperature of 960°C.

The complete set of enclosures ensures simple and quick installation.

Precise alignment and reliable wall mounting of the enclosure is ensured by anchorage points with dimensions between them.

The universal anodized screws are protected against corrosion and fit any type of screwdriver.

PRIME

Wall(flush)-mounting modular plastic distribution enclosures IP41

PRIME series wall(flush)-mounting metal distribution enclosures IP41 are used in residential and office premises. Designed for the installation of modular devices: circuit breakers, residual current devices, differential circuit breakers, timers, lighting control devices, etc.

The design of the enclosure and its individual elements is designed in such a way as to simplify and speed up the process of assembly and installation of the enclosure as much as possible.

Due to the unique design, the enclosures will successfully fit into any interior.

Advantages

- Stylish and ergonomic design.
- Complete set – ready to assemble.
- Safety support for N/PE buses.
- Convenient latch-lock for locking the door.
- Depth adjustment of the DIN rail.
- Possibility to re-hang the door.
- Possibility of sealing the enclosure.
- Break-out holes for cable entry of various diameters, as well as the possibility of inserting a cable channel into the enclosure (for wall-mounted models).

Specifications

Installation type	wall-mounted, flush-mounted
Degree of protection	IP41
Protection class	II
Enclosure material	ABS
Door material	polycarbonate
Enclosure color	RAL 9016 (white), RAL 9005 (black)
Number of rows	from 1 to 3
Number of modules	from 4 to 36
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	100
Operating temperature, °C	-20÷+85
Climatic modification	NF3
Impact strength	IK05 (0.7 J)

Design features

Snap-on safety support for N/PE buses.

Possibility of entering a cable duct and pipes of various diameters into the enclosure using a special insert.

Possibility of sealing the enclosure with a plastic screw.

Step-type DIN rail holder for depth adjustment of the DIN rail.

Convenient door latch lock with push mechanism.

Bright and informative individual packaging.

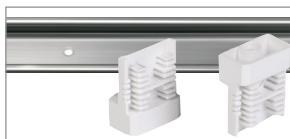

Ease of installation due to the absence of side walls on the base of the enclosure in wall-mounting models.

Stiffeners ensure the structural strength of the enclosure.

Component parts

DIN rail and step-type DIN rail holders

Latch lock and lock cover

Plastic screws, dowels

Plastic plugs for mounting holes

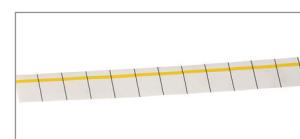

N/PE buses, N/PE bus support

Mounting level in enclosures for 18, 24 and 36 modules

Insert for wall-mounting metal distribution enclosures

Marking tape

KREPTA 7

Flush-mounting modular plastic distribution enclosures IP30

Flush-mounting enclosures for installation in residential and office premises. These enclosures have a unique design that provides convenience, quick installation and will harmoniously fit into any interior.

KREPTA

Advantages

- A wide selection of all kinds of accessories that ensure easy and quick installation.
- Protection against theft of electricity due to the possibility of sealing the enclosure.
- The steel door is protected against corrosion by phosphating and powder coating.
- Ease of use – reversible door.
- Simple change of the position of the NE bus support.
- Universal packaging.
- Easy cable entry due to the easily removable side panels
- The special design of the enclosure allows levelling the unevenness of the surfaces on which the enclosure is installed, within 18 mm.

Specifications

Installation type	flush-mounting
Degree of protection	IP30
Protection class	II
Enclosure material	polystyrene
Door, frame material	steel
Color	RAL 9016 (white)
Number of rows	from 1 to 4
Number of modules	from 14 to 56
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	63
Climatic modification	N3

Design features

The frame and door are made of sheet steel, protected against corrosion and painted with a special powder paint.

The ability to install removable panels in the center of the enclosure.

Sealing holes to protect against unauthorized access.

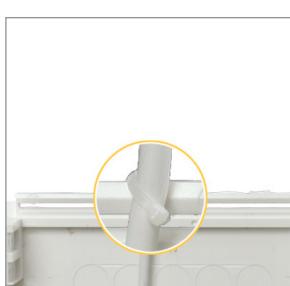

Possibility of installing a support with N and PE buses both from the top and from the bottom.

The removable panel makes it easy to enter conductors.

Saving time and quick installation are provided by mounting accessories.

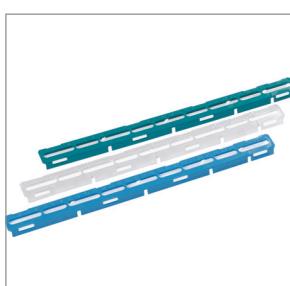

During operation, the cable can be fixed on a special mount.

The packaging is equipped with special marks that help to accurately position the enclosure in the niche.

Component parts

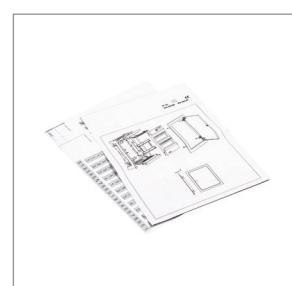

Marking clamps

Mounting frames. Screws and plastic dowels

DIN rails and support with N and PE buses

Instruction, marking sheet

Assortment

Name	Standard size	Buses	Weight, kg	Article
 Flush-mounting modular plastic distribution enclosure 4/14 with a metal door	1 row, 14 modules	N and PE: 13×16 mm ² – 2 pcs.	2.088	MKP54-V-14-30-01
 Flush-mounting modular plastic distribution enclosure 4/28 with a metal door	2 rows, 28 modules	N and PE: 17×16 mm ² – 2 pcs.	2.838	MKP54-V-28-30-01
 Flush-mounting modular plastic distribution enclosure 4/42 with a metal door	3 rows, 42 modules	N and PE: 27×16 mm ² – 2 pcs.	3.6	MKP54-V-42-30-01
 Flush-mounting modular plastic distribution enclosure 4/56 with a metal door	4 rows, 56 modules	N and PE: 27×16 mm ² – 2 pcs.	4.6	MKP54-V-56-30-01

KREPTA Multimedia

Flush-mounting modular plastic distribution enclosures for low-current systems IP41

Flush-mounting modular plastic distribution enclosure Multimedia are designed for the implementation of low-current circuits of any complexity.

The enclosure is suitable for installing any multimedia devices and organizing a home structured cabling system. Routers, patch panels, TV splitters and other low-current equipment are installed in the enclosure using special fasteners.

A well-thought-out modern design, durable plastic and convenient fasteners guarantee quick installation, long service life and safe operation.

Advantages

- Solid, impact resistant, fireproof plastic enclosure with metal frame.
- Doesn't shield Wi-Fi signals due to its plastic construction.
- Convenient and quick installation.
- Easy fixation of routers of all sizes in a special pocket.
- Ergonomic placement of all elements of low-current systems inside a spacious enclosure.
- 12-port patch panel included.

Specifications

Installation type	flush-mounting
Degree of protection	IP41
Enclosure material	polystyrene, metal
Door material	ABS
Number of ports	12
Rated current, A	100
Operating temperature, °C	-20÷+85
Impact strength	IK07
Service life	not less than 25 years
Guarantee period	5 years

Design features

Designed specifically for the installation of multimedia devices (routers, TV splitters, etc.).

Cable entry markings simplify network connection.

Plastic radio-transparent door (Wi-Fi).

The holder of fasteners (patch panel, fixing pocket) of stepped type for the possibility of adjusting the elements in depth.

Component parts

Mounting level

12-port patch panel for Keystone modules

Universal router pocket

Screws and plastic plugs

Flush-mounting modular plastic distribution enclosure -36 Multimedia	white (RAL 9010)	Flush-mounting	12 ports for Keystone modules	MKP15-V-06-36-41

KREPTA 5

Wall-mounting modular plastic distribution enclosure IP55

The enclosures can be installed in rooms with high humidity or dusty levels, as well as outdoors. Ideal for use in garages, car washes, basements, laboratories, workshops, etc.

Advantages

- The enclosures have a high level of strength and withstand impact energies of 0.7 Joules (IK05).
- Self-extinguishing plastic (filament test at 750°C).
- Step-type DIN rail holder for depth adjustment of the DIN rail.
- Safety support for N/PE buses.
- Break-out holes for wire routing.
- Possibility of re-hanging the door from both sides (left/right).
- Plastic screws ensure ease of installation.
- Protection of the enclosure and door from unauthorized entry – holes for sealing.

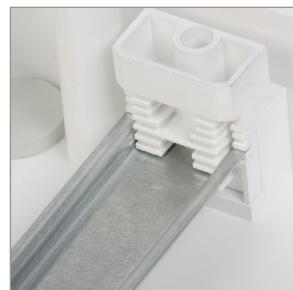

Specifications

Installation type	wall-mounted
Degree of protection	IP55
Protection class	II
Enclosure material	ABS
Door material	polycarbonate
Color	RAL 9016 (white)
Number of rows	from 1 to 3
Number of modules	from 5 to 36
Rated voltage, V	up to 400
Rated frequency, Hz	50
Rated current, A	100
Operating temperature, °C	-40÷+80
Climatic modification	N1
Impact strength	IK05 (0.7 J)

Design features

Safety support for N/PE buses.

Step-type DIN rail holder for depth adjustment of the DIN rail.

For ease of use of the enclosure, it is provided to change the direction of opening the door. With a slight push, the door is removed from the latches and installed on the other side.

Sealing of the enclosure is ensured by the special gasket and additional glands.

Possibility of sealing the enclosure door.

To protect against unauthorized entry and access to the relay contact, a seal hole is provided.

KREPTA 5

Wall-mounting modular plastic distribution enclosure with transparent cover 5/16 IP55

The enclosures are ideal for installation in rooms with high humidity or dusty levels: in garages, basements, etc., as well as for outdoor installations.

Can be used as metering boards – the ability to install a meter, metering and distribution boards; the ability to install modular equipment and meters, control panels; the ability to install a starter, intermediate relay, timers, etc.

KREPTA

Advantages

- Base material – self-extinguishing ABS plastic, cover material – impact resistant self-extinguishing polycarbonate, resistant to increased mechanical stress, which ensures electrical safety.
- The enclosure includes stepped glands and gaskets for the mounting holes, which provide additional sealing to the enclosure.
- The enclosure has supports for mounting a DIN rail and a neutral bus.
- The entry of wires (cables) is carried out through special break-out holes of various diameters.
- The ability to install a DIN rail both vertically and horizontally.
- There is a hole for a seal that protects against theft of electricity and unauthorized access to the relay contact.

Specifications

Installation type	wall-mounted
Degree of protection	IP55
Enclosure material	ABS
Cover material	polycarbonate
Color	RAL 9016 (white)
Operating temperature, °C	-20 ÷ +70
Impact strength	IK07 (2 J)

Assortment

KREPTA 7

Wall-mounting modular plastic distribution enclosure IP66

The increased degree of protection of the enclosure allows it to be used in premises with a high content of dust and moisture, for example, in industrial premises, garages, basements, car washes, in warehouses, as well as outdoors.

Designed for the assembly of distribution boards using modular equipment, for the input and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

KREPTA

Advantages

- High quality polyurethane gasket provides additional protection against moisture and dust.
- The ability to lock the enclosure from unauthorized access.
- Convenience of assembly and installation.
- Captive screws.
- Wide product range.
- Extended operating temperature range – from -25 to $+85^{\circ}\text{C}$.
- Complete set – ready to assemble.
- Stylish ergonomic design.

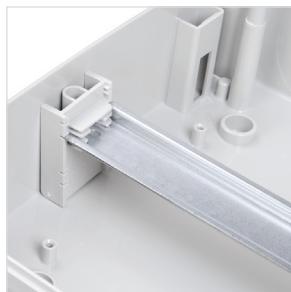

Specifications

Installation type	wall-mounted
Degree of protection	IP66
Protection class	II
Enclosure material	ABS
Door material	polycarbonate
Color	RAL 7035
Number of rows	from 1 to 3
Number of modules	from 4 to 48

Rated frequency, Hz	50
Rated current, A	100
Operating temperature, $^{\circ}\text{C}$	$-45 \div +85$
Climatic modification	N1
Impact strength	IK05 (0.7 J)

Design features

The opening direction of the front panel can be easily changed both to the right and to the left due to the plastic hinges.

Increased distance between DIN rail and back panel. The DIN rail is adjustable in depth; plastic clips are used to install it.

Protection of the enclosure from unauthorized access is ensured by a three-sided key lock.

The removable N and PE busbar holder can be installed both at the top and at the bottom of the enclosure on special mounts. The N and PE tires themselves are installed on a removable holder by simply snapping into the seats.

Convenient and precise mounting of the enclosure is possible due to the special marking of holes for fixing the enclosure to the wall.

Easy and quick installation of glands due to breakout holes of various diameters located at the top and bottom of the enclosure.

Plastic panels for meter installation

Designed for installation of single-phase and three-phase meters.

Modular devices for the distribution of electricity and protection of networks against overload and short-circuit current with a voltage of up to 400 V, 50 Hz can be installed in the panels with boxes simultaneously with the placement of a single-phase or three-phase meter for electricity metering.

Advantages

- The panels are made of self-extinguishing PVC.
- Panels with enclosures are equipped with N and PE buses.
- Sealing holes protect against unauthorized access.
- Easy and quick installation.

Specifications

Installation type	wall-mounted
Degree of protection	IP20 (IP40 with box)
Enclosure material	PVC
White color	RAL 9010
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	63
Meter type for installation	1-phase, 3-phase

Assortment

Name	Enclosure size	N and PE buses	Quantity in a package	Article
	6 modules	6x9 mm 4/1 - 1 pc.; 6x9 mm 6/1 - 1 pc.	28	MPP10-1
	8 modules	2x16 mm ² + 7x10 mm ² – 2 pcs.	24	MPP10-3

			90	MPP11-2

Wall-mounting plastic enclosure for metering and distribution IP55

Wall-mounting plastic enclosures for metering and distribution IP55 are designed for the installation of a single-phase, three-phase or induction electricity meter and modular equipment.

Due to the high degree of protection IP55, the enclosures can be installed in rooms with high levels of humidity and dust content, as well as outdoors.

Advantages

- Wide product range.
- Complete set – ready to assemble.
- Break-out openings for cable entry in the upper and lower parts of the enclosure.
- Possibility of installing single-phase, three-phase and induction meters (depending on the model).
- Possibility of installing the meter on a mounting panel or on a DIN-rail.
- Visual access to meter readings.
- Comfortable removable covers for quick access to circuit breakers.

Specifications

Installation type	wall-mounted
Degree of protection	IP55
Protection class	II
Impact resistance	IK05 (0.7 J)
Enclosure material	ABS
Rated voltage, V	400
Rated frequency, Hz	50
Rated current, A	63
Operating temperature, °C	-25÷+60
Climatic modification	N1
The number of single-pole circuit breakers installed in the enclosure	from 3 to 12 (depending on the model)
Type of installed meter (depending on the model)	single-phase/three-phase/induction

Design features

Removable covers for quick access to circuit breakers.

Possibility of sealing the incoming switch using the sealing device included in the standard package.

Possibility of sealing enclosures in models wall-mounting plastic enclosures for metering and distribution 3/8, 3/8 I, 3/6, 3/7-2.

Possibility of installing the meter on a mounting panel or on a DIN-rail.

Break-out openings for cable entry in the upper and lower parts of the enclosure.

Component parts

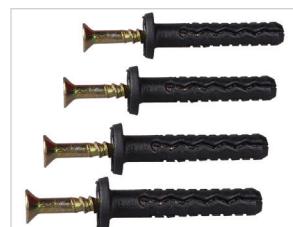

DIN rail

KREPTA 5

Wall-mounting plastic enclosures for metering and distribution IP66

Wall-mounting plastic enclosure for metering and distribution IP66 are designed for installation of 1-phase and 3-phase AC meters 220-380 V, 50 Hz, as well as modular equipment.

These enclosures can be mounted outdoors without a visor.

KREPTA

Advantages

- UV resistant.
- High degree of protection IP66 due to the seal.
- Convenient access to circuit breakers, the ability to install up to 12 circuit breakers.
- Holes for mounting on a mounting tape (except for wall-mounting plastic enclosure for metering and distribution 1/3 IP66 PC IEK®).
- Special hinges for quick door removal (removed when the door is open).
- Possibility of sealing the door (for wall-mounting plastic enclosures for metering and distribution 1/3 IP 66 PC IEK® and wall-mounting plastic enclosure for metering and distribution 3/12 IP 66 PC IEK®) and the enclosure.
- Complete set – ready to assemble.
- Break-out openings for cable entry in the upper and lower parts of the enclosure.
- Possibility of installing single-phase, three-phase and induction meters (depending on the model).
- Possibility of installing the meter on a mounting panel or on a DIN-rail.
- Visual access to meter readings.

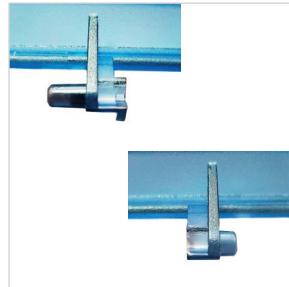

Specifications

Installation type	wall-mounted
Degree of protection	IP66
Protection class	II
Impact resistance	IK08 (5 J)
Enclosure material	ABS
Door material	polycarbonate
Rated current, A	100
Operating temperature, °C	-40÷+80
Climatic modification	N1
Service life	more than 15 years
The number of single-pole circuit breakers installed in the enclosure	from 3 to 12 (depending on the model)
Number of rows	from 1 to 2
Type of installed meter (depending on the model)	single-phase/three-phase/induction

Design features

High degree IP66 due to the seal.

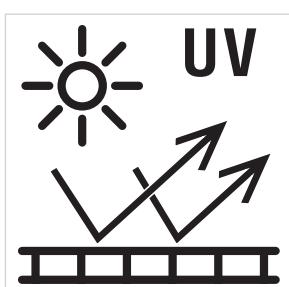

Special hinges for quick door removal.

The possibility of sealing the enclosure and the door (depends on the model).

Holes for mounting on a mounting tape (except for wall-mounting plastic enclosure for metering and distribution 1/3 IP66 PC IEK®).

Resistant to UV rays due to the material properties of the enclosure.

Convenient access to circuit breakers, the ability to install up to 12 circuit breakers.

Installing the meter on a mounting panel and on a DIN rail.

Color consumer package*.

KREPTA 7

Polyester enclosures for meter installation IP54

Polyester enclosures for power input and metering boards are designed for the installation of electricity meters and modular equipment. Due to design and materials can be installed in rooms with a high content of dust, moisture and harmful substances, as well as outdoors.

KREPTA

Advantages

- High degree of protection against mechanical damage.
- Full set.
- High level of electrical and fire safety.
- The enclosures do not need painting and grounding during installation.
- Possibility to operate outdoors and in rooms with a high content of harmful substances.

Specifications

Installation type	wall-mounted
Degree of protection	IP54
Protection class	II
Enclosure material	polyester
Color	RAL 7035
Rated voltage	400 V
Rated dielectric strength	660 V
Service life	30 years
Operating temperature, °C	-50÷+70
Climatic modification	NF1
Impact resistance	IK10 (20 J)

Design features

Possibility of sealing the blanking plate by means of seal-latches.

A window for prompt reading of the electricity meter.

Mounting panel for installing any type of meter.

Component parts

DIN rail

Lock

Mounting panel

Blanking plate

Latching seals

Plastic enclosures with mounting panel IP65

Plastic enclosures IP65 with mounting panel are made of impact resistant ABS plastic and are designed to provide reliable protection of equipment in power distribution systems and process automation, as well as to accommodate and protect various electrical and electronic components from environmental influences.

Advantages

- High degree of protection against mechanical damage.
- Full set.
- High level of electrical and fire safety.
- The enclosures do not need painting and grounding during installation.
- Possibility to operate outdoors and in rooms with a high content of harmful substances.

Specifications

Material	impact resistant ABS plastic
Enclosure color	gray, RAL 7035
Degree of protection	IP65
Impact resistance	IK10 (20 J)
Protection class	II
Installation type	wall-mounted
Operation temperature	-45 °C÷+80 °C
Climatic modification	NF1
Glow-wire test of the enclosure	650°C
Door opening angle	200°

Design features

Galvanized mounting panel included.

Mounting brackets are convenient for mounting and allow you to save the IP65 protection level

High IP grade due to the polyurethane gasket.

Three-sided key lock.

Stiffeners provide impact resistance: IK10 (20 J).

Colored consumer packaging.*

TETRA 7

Polyester enclosures with mounting panel IP54

Polyester enclosures with a mounting panel are designed for assembling a variety of electrical panels: power, control, automation. They allow installation of both modular and conventional equipment.

Due to the properties of the material from which they are made, they are universal for use in any conditions and on any objects: in rooms with a high concentration of acid, salt and dust, at objects of the transport system, as well as in the open air.

TETRA

Advantages

- High degree of protection against mechanical damage.
- Full set.
- High level of electrical and fire safety.
- The enclosures do not need painting and grounding during installation.
- Possibility to operate outdoors and in rooms with a high content of harmful substances.

Specifications

Installation type	wall-mounted
Degree of protection	IP54
Protection class	II
Enclosure material	polyester
Color	RAL 7035
Rated voltage	400 V
Rated dielectric strength	660 V
Service life	30 years
Operating temperature, °C	-50÷+70
Climatic modification	NF1
Impact resistance	IK10 (20 J)

Design features

Sloped roof for water drainage.

The labyrinth system provides IP54 enclosure protection without the use of a seal.

The possibility of assembling enclosures into blocks due to the modular design.

Possibility of re-hanging the door.

LIGHT series metal assembling enclosure for staircase distribution modular board	113

UNIVERSAL series wall-mounting metal distribution enclosure and flush-mounting metal distribution enclosure

Designed for the assembly of distribution boards using modular equipment, for the input and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

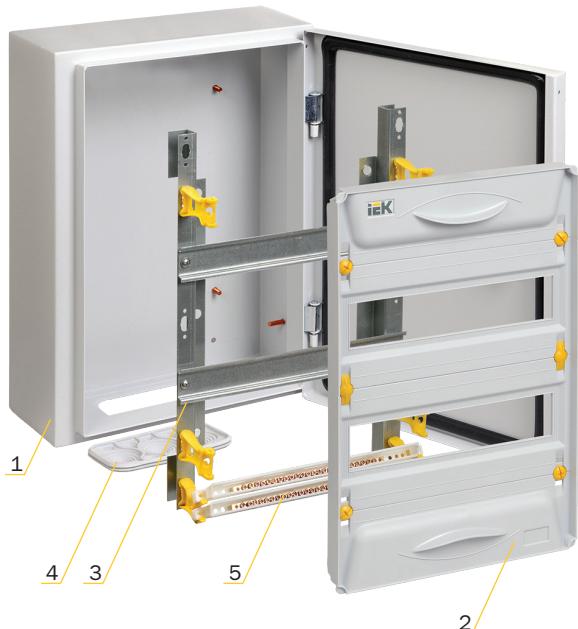

Advantages

- Convenience and ease of assembly due to the removable mounting frame.
- Full set.
- Buses can be installed top and bottom.
- Multifunctional cable entry.
- Increased distance between the rear panel and the DIN rails for easy wiring.
- The possibility of sealing the blanking plate.
- Rigid structure.
- Unified model range.
- High level of electrical safety.
- Stylish ergonomic design.
- Certificate of conformity.
- Protective operating panel, supports and N and PE buses.

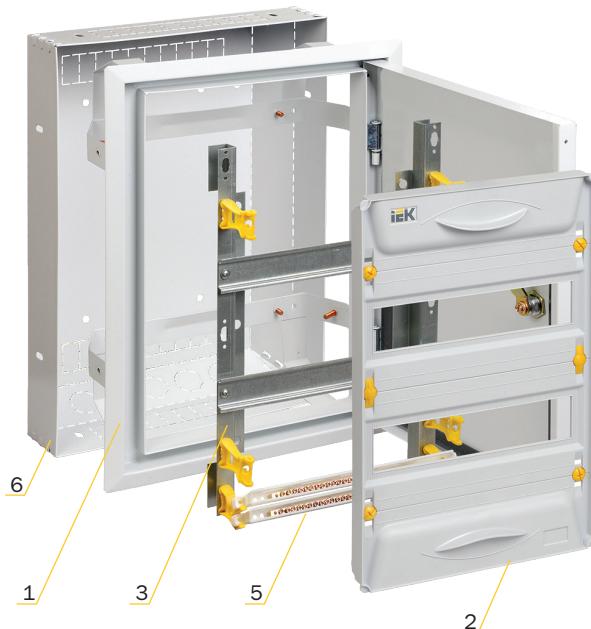

Specifications

Installation type	wall-mounted, flush-mounted
Metal thickness	0.8-1 mm
Rated current	up to 125 A
Cover type	powder shagreen, shagreen
Color	RAL 7035 (gray)
Degree of protection	mounted – IP54, built-in – IP31
Climatic modification	N2 – for IP54, N3 – for IP31
Apparatus type	modular
Cable entry	top and bottom – in flush-mounting enclosures, from below – in wall-mounting
Impact resistance	IK10 (20 J)

Design features

- 1 – Shell
- 2 – Operation panel and plastic elements
- 3 – Mounting frame
- 4 – Cable gland
- 5 – N and PE buses and bus support
- 6 – Protective cover

A protective operational panel eliminates electric shock during the operation of the finished product.

N and PE buses are installed in calipers to ensure safe operation. This arrangement of the buses makes cable entry more convenient.

In the IP54 version, the seal is provided with expanded polyurethane.

In flush-mounting enclosures it is possible to install a protective perforated casing, which greatly simplifies the installation of the housing in a niche.

The removable mounting frame provides convenience and ease of assembly, the ability to mount outside the enclosure. DIN rails are installed with a pitch of 125 mm. For the convenience of cable routing, the distance between the rear wall and DIN rails has been increased.

There are grounding studs in all wall(flush)-mounting metal distribution enclosures of the UNIVERSAL series.

Component parts

Mounting frame

Operation panel and plastic elements

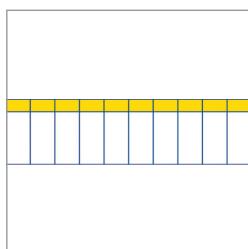

Cable gland (for wall-mounting metal distribution enclosure)

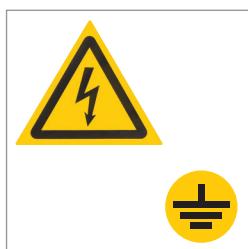

Supports with N and PE buses

Plug YIS50-12-K03

Marking table

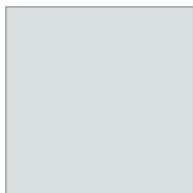

Electrical safety signs

Kit for enclosure grounding and hinge (for wall-mounting metal distribution enclosure)

Color

RAL 7035

Explanation of designations

Wall-mounting metal distribution enclosure-24z-1 IP54 UNIVERSAL

24 – number of installed modules:
24, 36, 48, 2×24, 2×36, 2×48

z – Lock included

1 – modification number

IP54 – degree of protection

UNIVERSAL – series name

Flush-mounting metal distribution enclosure-24zk-1 36 IP31 UNIVERSAL

24 – number of installed modules:
24, 36, 48, 2×24, 2×36, 2×48

z – Lock included

k – Protective casing

1 – modification number

36 – type, color, structure of the coating surface:

36 – EPR/shagreen leather, RAL 7035 (light gray)

IP31 – degree of protection

UNIVERSAL – series name

PRO series wall(flush)-mounting metal distribution enclosures

Designed for the assembly of distribution boards using modular equipment, for the input and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

TITAN

Modular metal enclosures

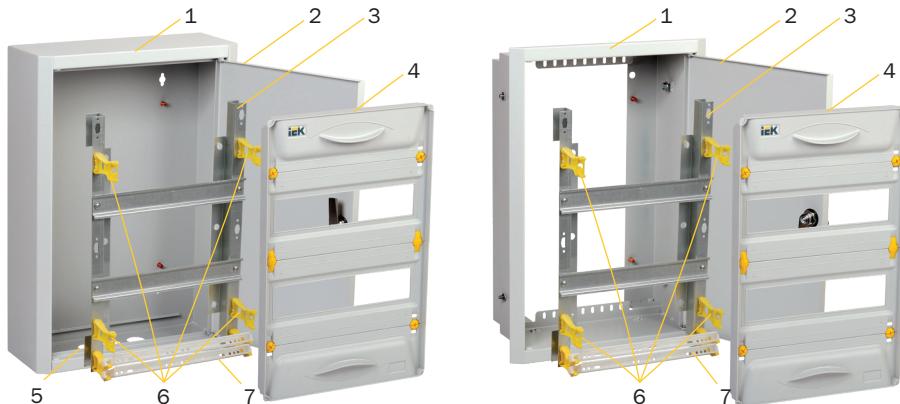

Advantages

- Convenience and ease of assembly due to the removable mounting frame.
- High level of electrical safety due to the protective operating panel and bus supports.
- Buses can be installed top and bottom.
- Increased distance between the rear panel and DIN rails for easy wiring.
- Rigid and lightweight construction.
- Unified model range.
- Stylish design.
- Reversible doors in PRO wall-mounting metal distribution enclosures IP31.
- Certificate of conformity.

Specifications

Installation type	wall-mounted, flush-mounted
Metal thickness	0.8-1.0 mm
Rated current	up to 125 A
Cover type	powder, shagreen (matt)
Color	RAL 7035 (gray)
Degree of protection	wall-mounting- IP31, IP54, flush-mounting – IP31
Door opening angle	105°
Apparatus type	modular
Climatic modification	NF3 for IP31, N2 for IP54
Input of conductors	Flush-mounting metal distribution enclosure (PRO series) – top and bottom; wall-mounting metal distribution enclosure (PRO series) – bottom

Design features

1 – shell,
2 – door,
3 – mounting frame,
4 – operational panel,
5 – holes for input of cables and wires,
6 – plastic stands for fastening the operational panel,
7 – support for N/PE buses.

Modular metal enclosures

TITAN

The removable mounting frame provides convenience and ease of assembly, the ability to mount outside the enclosure. DIN rails are installed with a pitch of 125 mm. For the convenience of cable routing, the distance between the rear wall and DIN rails has been increased.

Perforation on the back plate of the PRO series flush-mounting metal distribution enclosures allows you to fix the wires with clamps.

A protective operational panel eliminates electric shock during the operation. Possibility of sealing. A grey plug for 12 modules UNIVERSAL/PRO (YIS50-12-K03) must be ordered separately.

The beveled angles of the PRO series wall-mounting metal distribution enclosures are in line with the market trends.

The support ensures safe operation. Installation from above and from below is possible. Buses must be ordered separately:
 – YNN11-12-100 PEN bus 6×9 mm 12/2;
 – YNN11-24-100 PEN bus 6×9 mm 24/2;
 – YNN21-24-100 PEN bus 8×12mm 24/2.

The screws on the side walls of the PRO series flush-mounting metal distribution enclosure allow fixing the enclosures in a niche.

In the PRO flush-mounting metal distribution enclosure, it is possible to install the enclosure after laying the cables and wires: convenient and easy installation in a niche.

All PRO series wall(flush)-mounting metal distribution enclosure have grounding studs.

TITAN

Wall-mounting metal distribution enclosures

Designed for the assembly of distribution boards using modular equipment, for the input and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

Advantages

- Increased corrosion resistance.
- High quality coating.
- One safety lock.
- A set of additional accessories.
- High manufacturability and ease of assembly.
- Several colors and paint options.
- High level of electrical safety.
- Quality certificate.

Specifications

Installation type	wall-mounted
Metal thickness, mm	0,8–1,0
Rated current, A	up to 100
Cover type	powder, shagreen / gloss
Color	RAL 7035 (gray), RAL 9016 (white)
Degree of protection	IP31, IP54
Door opening angle	105°
Apparatus type	modular
Climatic modification	NF3 for IP31, N2 for IP54

Design features

Mounting rail for attaching N and PE busbars (busbars sold separately).

In the IP54 version, the multi-faceted protective channel of the enclosure prevents the ingress of dirt and water when the door is opened.

Protective operational panel excluding electric shock during the operation of the finished product.

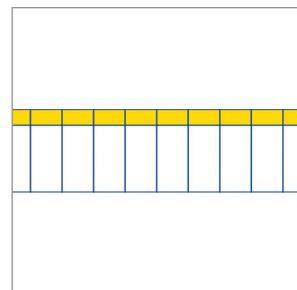

The IP54 version has a polyurethane foam seal.

Component parts

Electrical safety signs

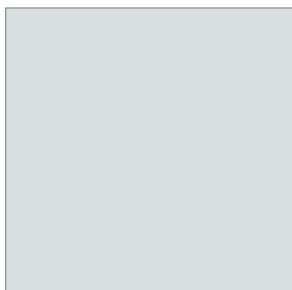

Marking table

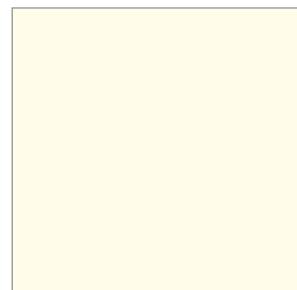

Glands (for IP54 enclosures)

Flush-mounting metal distribution enclosures TREND series

Designed for the assembly of distribution boards using modular equipment, for the input and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

TITAN

Advantages

- Increased corrosion resistance.
- High quality coating.
- Rigid structure.
- One safety lock.
- High manufacturability and ease of assembly.
- Several colors and paint options.
- High level of electrical safety.
- Certificate of conformity.

Specifications

Installation type	flush-mounting
Metal thickness	0.8-1.0 mm
Rated current	up to 125 A
Cover type	powder, shagreen / gloss
Color	RAL 7035 (gray), RAL 9016 (white)
Degree of protection	IP31
Door opening angle	105°
Apparatus type	modular
Climatic modification	NF3

Design features

Improved appearance – beveled angles.

Protective operational panel eliminating electric shock during the operation of the finished product.

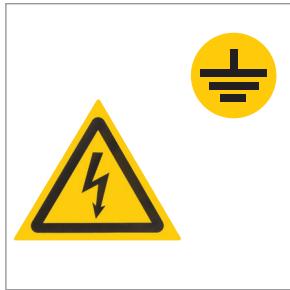

Galvanized rail for fastening N and PE busbars.

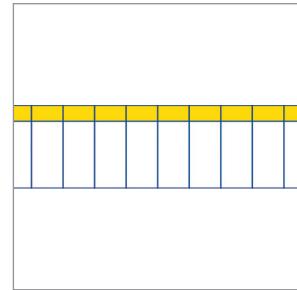

The rigidity of the enclosure structure has been significantly increased.

TITAN

Wall(flush)-mounting metal enclosures for metering and distribution

Designed for the assembly of metering and distribution boards using modular equipment, for the input and distribution, metering and distribution of electricity, as well as for the protection of 230/400 V networks from overload and short-circuit currents.

**Advantages**

- Increased corrosion resistance.
- High quality coating.
- One safety lock.
- High manufacturability and ease of assembly.
- High level of electrical safety.
- Certificate of conformity.

Specifications

Installation type	wall-mounted, flush-mounted
Metal thickness	0.8-1.0 mm
Rated current	up to 125 A
Cover type	powder, shagreen / gloss
Color	RAL 7035 (gray), RAL 9016 (white)
Degree of protection	wall-mounting- IP31, IP54, flush-mounting – IP31
Door opening angle	105°
Apparatus type	modular
Climatic modification	NF3 for IP31, N2 for IP54

Design features

The protective separate operational panel excludes the possibility of electric shock during the operation of the product, and also allows sealing the input device without restricting access to group devices.

In the IP54 version, the multi-faceted protective channel of the enclosure prevents the ingress of dirt and water when the door is opened.

The universal mounting panel for the meter allows you to install any type of single-phase or three-phase meters without additional adapters.

A seal made of expanded polyurethane is provided in the IP54 version.

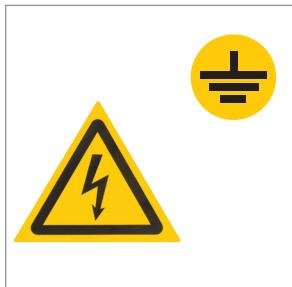

Information window for easy meter reading.

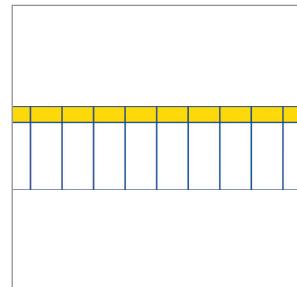

Mounting rail for fixing N and PE* busbars.

TITAN

Wall-mounting metal enclosures for metering

Designed for the assembly of input metering boards using modular equipment, for input and metering of electricity in residential and industrial premises.

Advantages

- Outdoor installation.
- Increased corrosion resistance.
- High quality coating.
- Small-sized design.
- High manufacturability and ease of assembly.
- Ease of installation.
- High level of electrical safety.
- Quality certificate.

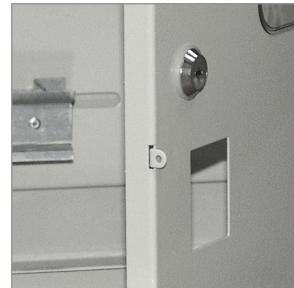

Specifications

Installation type	wall-mounted
Metal thickness, mm	1.0
Rated current, A	50
Cover type	powder, shagreen
Color	RAL 7035 (gray)
Degree of protection	IP54, IP66
Door opening angle	120°
Apparatus type	modular
Climatic modification	N1

Design features

Allow to separately place various modular devices.

The possibility of sealing the operational panel in the closed condition is provided.

Operational panel covering the electricity meter and electrical devices. The panel is attached to the enclosure with hinges and locked with an individual lock.

An additional enclosure visor prevents the ingress of dirt and water when the door is opened.

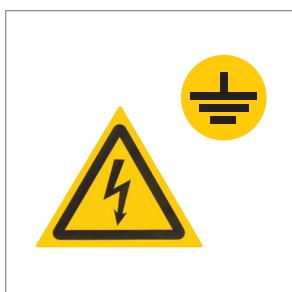

The operational panel has a window for taking readings of the electricity meter and a slot for access to the protection device.

Foamed polyurethane seal.

Kit for mounting metal enclosures

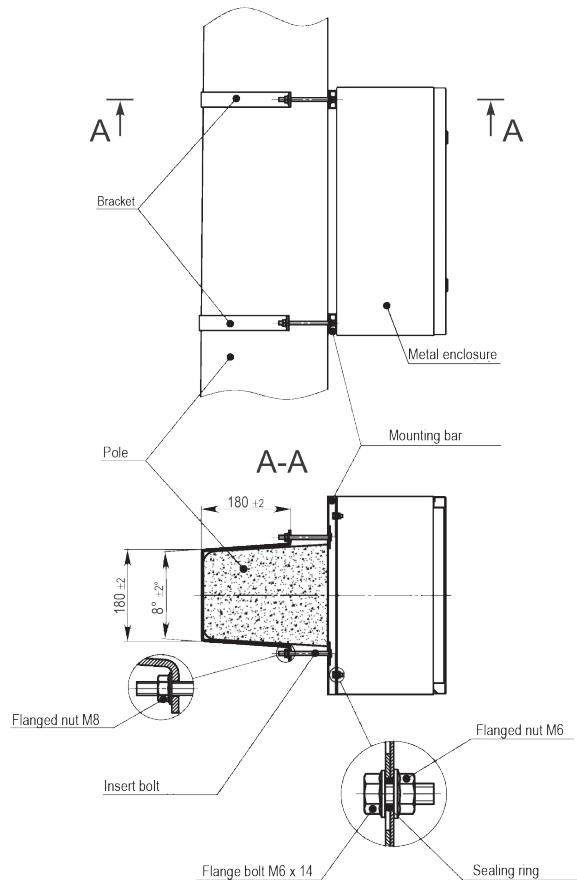

The kit is designed for mounting metal enclosures:

- on SV95 and SV105 reinforced concrete racks – fastening using brackets;
- on poles with a circular cross-section with a diameter of up to 350 mm – fastening using mounting strips.

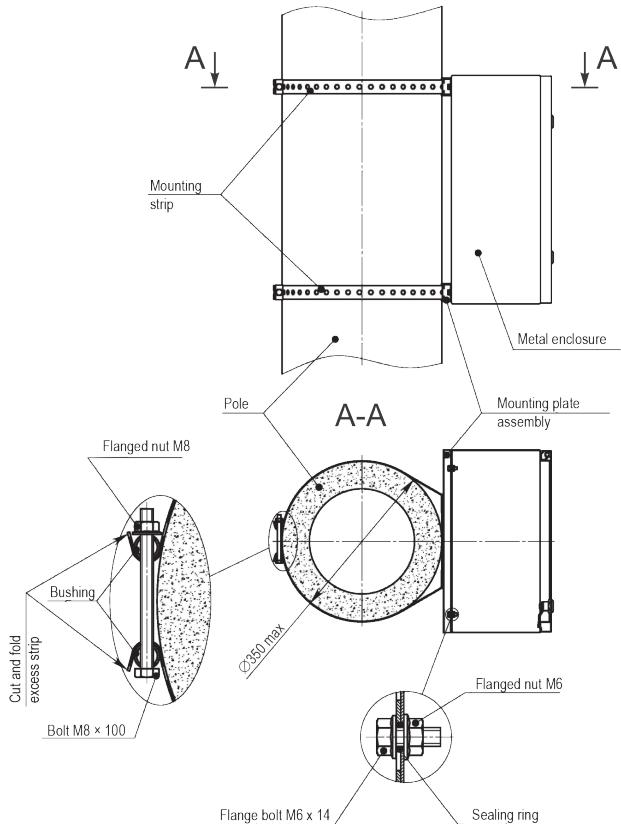

The largest mass of the fixed electrical panel is 80 kg.

Metal enclosures for staircase distribution boards

Used for assembling staircase distribution boards for receiving and distributing electricity in residential and public buildings, as well as for protecting outgoing lines during overloads and short circuits.

The welded metal enclosure consists of three compartments: input and metering, distribution, and low-current equipment compartment.

Perforated bars for meter fastening (as per number of apartments) are located in the input and metering compartment of metal enclosures for staircase distribution board X-1; a mounting panel is installed in metal enclosures for staircase distribution board X-6.

It is possible to install a trunk main tripping device in the same compartment.

In the distribution compartment, there are DIN rails for branch-circuit line devices and elements for installing N and PE buses. The compartment is equipped with an operational panel.

The low-current equipment compartment is equipped with perforated profiles for laying television and radio networks, telephone lines, security alarm networks, intercoms, etc. A dividing partition is located between the low-current and power compartments.

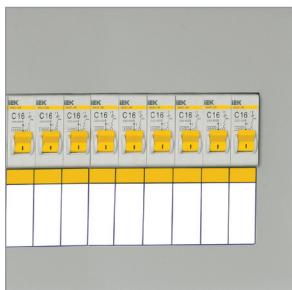

Advantages

- Increased corrosion resistance.
- High quality coating.
- High manufacturability and ease of assembly.
- Ease of installation.
- High level of electrical safety.
- Certificate of conformity.
- The service life is at least 25 years.

Specifications

Installation type	wall-mounting, flush-mounting is possible
Metal thickness	1.0 mm
Rated current for one apartment	50 A
Cover type	powder, shagreen
Color	RAL 7035 (gray)
Degree of protection	IP31
Door opening angle	105°
Climatic modification	NF3

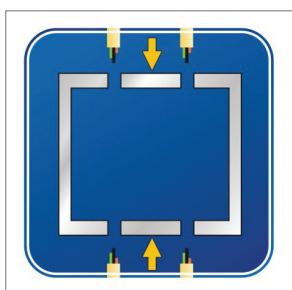

Design features

Number of modules per apartment:
 - up to 9 modules in metal enclosures for staircase distribution board-X-1, metal enclosures for staircase distribution board-X-6 and metal enclosures for staircase distribution board LIGHT for 1, 2, 3, 4 apartments;
 - up to 7 modules in metal enclosures for staircase distribution board-X-1270 for 5 and 6 apartments.

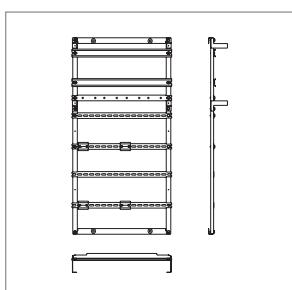

Possibility of a wall-mounting version when using an additional casing:
 - for metal enclosures for staircase distribution board-X-1, metal enclosures for staircase distribution board-X-6 and metal enclosures for staircase distribution board LIGHT, a casing for wall-mounting version (MKM42-00-31) is used;
 - for metal enclosures for staircase distribution board-X-1270, a casing for metal enclosures for staircase distribution board-1270 (MKM42-1270-31) is used for wall-mounting version.

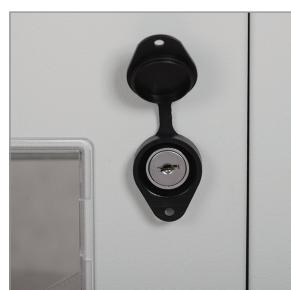

Possibility of installing a board after laying the main line.

The door of the input and metering compartment has windows for taking meter readings.

Removable mounting frame in metal enclosures for staircase distribution board-X-1 and metal enclosures for staircase distribution board LIGHT. The meters can be installed both on three mounting points and a DIN rail in metal enclosures for staircase distribution board X-1. In metal enclosures for staircase distribution board LIGHT – on a DIN rail.

Possibility of sealing the metering compartment (using the lock cover).

Each of the compartments is closed with a separate door. The lock for the low-current compartment is different from the lock for other compartments.

The removable mounting panel of metal enclosures for staircase distribution board X-6 allows the meters to be installed both on three mounting points and on a DIN rail.

Metal enclosures for staircase distribution board without a low-current compartment

Metal enclosures for staircase distribution boards are used for assembling staircase distribution boards for receiving and distributing electricity in residential and public buildings, as well as for protecting outgoing lines during overloads and short circuits.

The welded metal enclosure consists of two compartments: input/metering and distribution.

In the input and metering compartment of the metal enclosures for staircase distribution board-X-2, there are DIN rails for fixing the meters (according to the number of apartments).

In the distribution compartment, there are DIN rails for branch-circuit line devices and elements for installing N and PE buses. The compartment is equipped with an operational panel.

A wall-mounting version of the metal enclosure for staircase distribution board-X-2 is possible when using an additional casing.

Modular metal enclosures

Advantages

- Increased corrosion resistance.
- High quality coating.
- High manufacturability and ease of assembly.
- Ease of installation.
- High level of electrical safety.
- Certificate of conformity.
- The service life is at least 25 years.

Specifications

Installation type	wall-mounting, flush-mounting is possible
Rated current for one apartment	50 A
Cover type	powder, shagreen (matt)
Color	RAL 7035 (gray)
Degree of protection	IP31
Door opening angle	105°
Climatic modification	NF3
Apparatus type	modular

Design features

Distribution compartment for 24 modules (4 windows with 6 modules each).

Possibility of a wall-mounting version when using an additional casing.

The operational panel in the distribution compartment protects against direct contact with live parts.

Convenient windows for taking meter readings.

Possibility of sealing the metering compartment (using the lock cover).

Metal assembling enclosure for staircase distribution modular board

The metal assembling enclosure for staircase distribution modular board is used to make a staircase distribution modular board (SDMB) on its basis. In turn, the metal assembling enclosure for staircase distribution modular board is intended for the reception, metering and distribution of electricity in 400/230 V networks, as well as the placement of devices for low-current networks (television and radio networks, telephone lines, intercoms, etc.) and equipment for an automated meter reading and control system (ACEMS).

The metal assembling enclosure for staircase distribution modular board is a collapsible structure, consisting of separately supplied elements: a cover of electrical cabinet for staircase distribution modular board, in which a power cable is laid, a communication and signaling box, metal enclosure for metering and distribution, as well as compensators for the possibility of height adjustment.

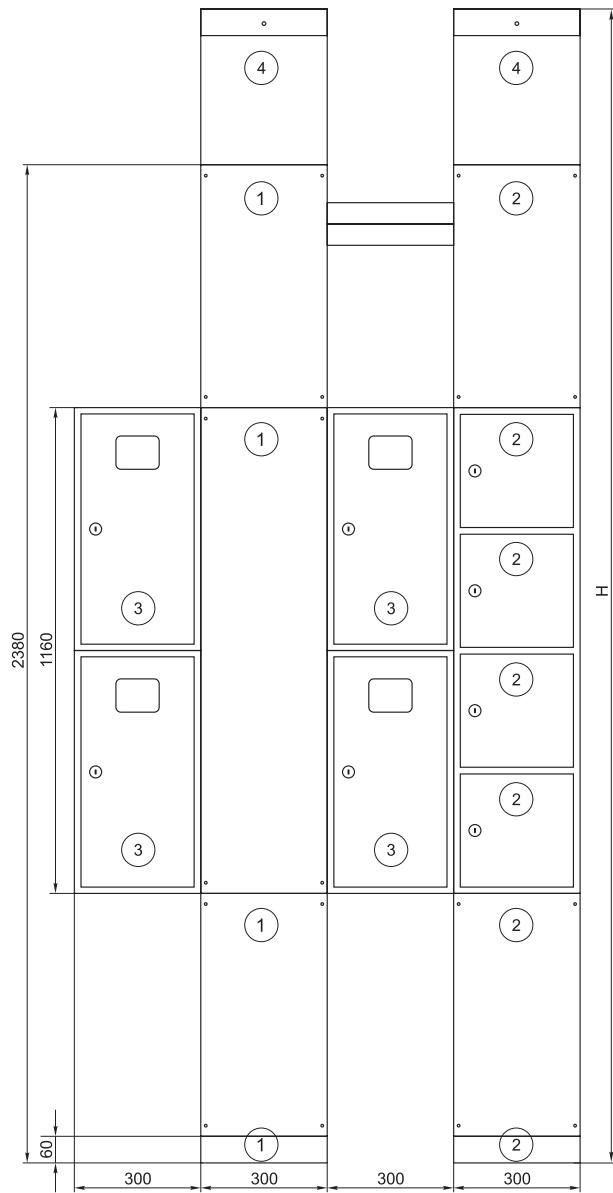

Advantages

- Ease of installation and service provided by removable front panels and removable mounting panels.
- Possibility of assembling both right and left positions, depending on the required design.
- The light weight of individual blocks allows you to easily lift to any floor and install the panel on the floor.
- Wide assortment, various designs in height from 2380 to 3850 mm.
- Increased corrosion resistance.
- Ease of assembly.

Specifications

LIGHT series metal assembling enclosure for staircase distribution modular board

Metal assembling enclosures for staircase distribution modular boards IEK® are designed for input, metering and distribution of electricity in 380/220 V networks, placement of protection devices for outgoing lines from overloads and short circuits, as well as for placement of low-current networks and ACEMS equipment.

Modern design solution for receiving, distributing and metering electricity in multi-storey residential buildings.

Modular metal
enclosures

Advantages

- Installation in buildings with unintended niches, with no cable draws.
- Possibility to combine different variations according to the number of apartments on the floor and the height of the ceilings.
- Lightweight design.
- Ease of installation.

Specifications

Version	floor type, wall-mounting
Degree of protection	IP31, IK06
Climatic modification	NF3
Color	grey (RAL7035)

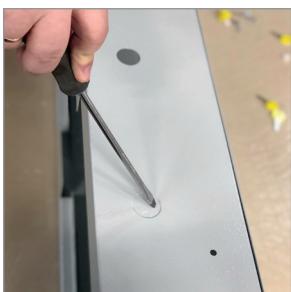

Design features

Convenient installation over the laid trunk cables due to the completely overhead design of the cover of electrical cabinet for staircase distribution modular board.

Universal mounting panel for any type of meters.

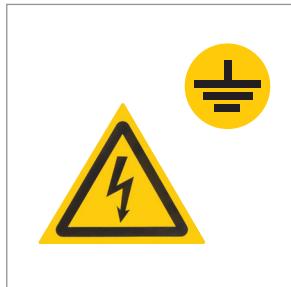

Knock-out holes on the side surfaces speeds up the installation process.

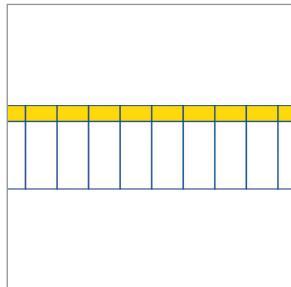

Universal height compensators have a stroke of 100-200 mm and are suitable for non-standard spans.

Low voltage distribution switchboard (LVDS)

Light boards with switch, flush-mounted light boards with switch for industrial and public buildings	117
Stepdown transformer boxes	120
Distributor for construction sites	123
Boxes with a switch and fuses	125

Light boards with switch, flush-mounted light boards with switch for industrial and public buildings

Designed for the reception and distribution of electricity in residential and industrial premises, as well as for the protection of lines against overloads and short-circuit currents in AC networks with a voltage of 230/400 V.

Input, three-pole, and group, single-pole, automatic switches, as well as N and PE buses are installed inside the enclosure.

Low voltage distribution switchboard (LVDs)

Advantages

- Increased corrosion resistance.
- High quality coating.
- Small-sized design.
- Fully welded enclosure.
- High manufacturability and ease of use.
- High level of electrical safety.
- Quality certificate.

Specifications

Installation type	wall-mounted, flush-mounted
Metal thickness, mm	0,8–1,0
Cover type	powder, shagreen
Color	RAL 7035 (gray)
Degree of protection	IP31
Door opening angle	105°
Apparatus type	modular
Rated operating voltage, V	230/400
Rated frequency, Hz	50
Rated insulation voltage, V	600
Type of grounding system	TN-C, TN-S

Design features

Solid metal enclosure with a lockable door.

The operational panel excludes the possibility of electric shock during the operation of the product.

Switching of group devices is made by a three-row connecting bus.

Stepdown transformer boxes

Designed for powering local or repair lighting, as well as for connecting portable lamps and tools.

Stepdown transformer boxes have a collapsible metal enclosure, inside of which the following components are installed:

- a single-phase step-down transformer OSO-0.25 with a power of 250 W;
- automatic switches VA47-29;
- plug socket.

Low voltage distribution
switchboard (LVDs)

Advantages

- Increased corrosion resistance.
- High quality coating.
- Small-sized design.
- High manufacturability and ease of use.
- High level of electrical safety.
- Aesthetic appearance.
- Quality certificate.

Distributor for construction sites

The distributor for construction sites is designed for the safe distribution of energy and for the connection of various electrical consumers. The scope of application is not limited to construction sites, this device can be used in allotment associations, in garage cooperatives and in many other places where the safe use of power electrical equipment is necessary.

Functions of the distributor for construction sites:

- protection of users from electric shock in case of accidental contact with live parts of electrical installations or due to damage to the insulation of live conductors.
- Protection against fire due to leakage currents to earth in places of insulation damage.
- Protection of working electrical devices from overload and short circuit currents.

Low voltage distribution switchboard (LVDS)

Advantages

- Increased corrosion resistance.
- High quality coating.
- Small-sized design.
- High manufacturability and ease of use.
- High level of electrical safety.
- Aesthetic appearance.
- Quality certificate.
- Wall mountable.
- Voltage presence indication.

Specifications

Rated working voltage	400/230 V
Rated frequency, Hz	50
Primary circuit rated current, A	40...63
Secondary circuit rated current, A	16, 32
Rated insulation voltage, V	600
Maximum permissible value of prospective short-circuit current, kA	4.5
Climatic modification	N1
Degree of protection	IP44
Type of grounding system	TN-S
Color	RAL 7035 (gray)

Boxes with a circuit breaker and a safety device

Designed for infrequent switching and protection against short-circuit currents in three-phase alternating current circuits with a voltage of 400/230 V and a frequency of 50 Hz. A VR-32I switch-disconnector, three DP-33 fuse holders with a PPNI fuse are installed inside the enclosure. Cable input and output is provided from below. The control handle of the VR-32I switch is brought out.

Advantages

- Outdoor installation.
- High level of electrical safety.
- Fully welded enclosure.
- Increased corrosion resistance.
- Certificate of conformity.

Specifications

Installation type	wall-mounted
Metal thickness, mm	1.0
Rated operating voltage, V	400
Degree of protection	IP54
Climatic modification	N1
Input of conductors	bottom
Color	RAL 7035 (gray)
Protection class	I
Type of grounding system	TN-S

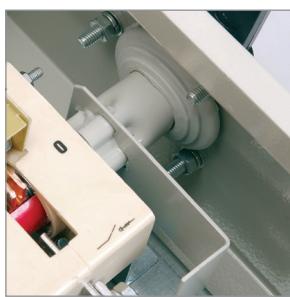

Design features

An additional enclosure visor prevents the ingress of dirt and water when the door is opened.

The seal on the drive shaft of the switch-disconnector ensures the degree of protection IP54.

The door locking device provides a high level of electrical safety.

The airtight seal made of expanded polyurethane protects against moisture and dust penetration.

GARANT series metal enclosures with mounting panel

GARANT series metal enclosures with mounting panel were specially designed for use in adverse weather and industrial conditions. The enclosures are used to assemble a variety of electrical panels: power, control, automation. They allow installation of both modular and conventional equipment.

Degree of protection IP65, climatic modification N1 (possibility of installation in the open air).

The GARANT series metal enclosures with mounting panel IP65 have a seal made of two-component sealant on the door and a dust and moisture-proof lock with protective fittings. The enclosures also have a protective visor and a protective groove to prevent the ingress of dirt and water when the door is opened. Due to the design features, the equipment is installed on mounting panels, which are adjustable in depth.

Advantages

- Enhanced protection against external influences and adverse factors (degree of protection IP65, climatic version N1).
- Depth adjustment of the mounting panel.
- Possibility of installing blanking plates.
- Profile for the installation of lighting equipment.
- A protective visor and protective channel prevent the ingress of dirt and water when the door is opened.
- Ease of installation due to the increased usable area of the mounting panel.
- Wide range of accessories.
- Dust and moisture proof lock.
- Removable top and bottom enclosure covers provide easy access to equipment during installation.
- High level of electrical safety.
- High quality coating.
- Increased corrosion resistance.
- Full set.
- One safety lock.

Specifications

Installation type	wall-mounted
Metal thickness	1.0 mm – for metal enclosures with mounting panel of the first 3 sizes; 1.4 mm – for metal enclosures with mounting panel above the 3rd size
Rated current	up to 630 A
Cover type	powder, shagreen
Color	RAL 7035
Degree of protection	IP65
Door opening angle	105°
Apparatus type	any
Climatic modification	N1

Design features

Technological visor – protection from dirt and water when opening the door.

Possibility of installing metal blanking plates (LG panels – front solid plates and LMA – front plates for modular automations) at different depths. Refers to accessories and must be ordered separately.

Profile for the installation of signaling equipment. High quality polyurethane foam seal around the door.

Perforations for the installation of cable ties.

Depth adjustment of the mounting panel due to the perforation of the corner enclosure welded to the bottom.

Reinforced hinges. Protective cap.

Dust and moisture-proof fittings for a lock with the possibility of sealing (included in the product) – ensuring the degree of protection IP65.

Forging around the perimeter of the doorway to strengthen the rigid structure.

Component parts

- Data sheet.
- Installation instructions.
- Electrical safety signs.
- Kit for enclosure grounding and mounting.
- Rubberized rings to ensure IP65 protection at the enclosure fixing points.

Explanation of designations

- 1** – enclosure size
- 0** – modification of the GARANT series
- N1** – climatic modification
- IP65** – degree of protection

* Accessories must be ordered separately. The set of all accessories includes hardware for their installation.

** The mounting angle is included in the basic package of the enclosure. Can be ordered additionally as an accessory.

PRO series metal enclosures with mounting panel

PRO series metal enclosures with mounting panel are used to assemble a variety of electrical panels: power, control, automation. They allow installation of both modular and conventional equipment.

Welded metal enclosure with removable mounting panel. In IP54 version, climatic modification N1 (possibility of installation in the open air). IP 54 PRO series metal enclosures with mounting panel have a two-component sealant seal and a dust and moisture proof lock on the door. Also, IP54 enclosures have a protective cover and a protective channel to prevent the ingress of dirt and water when the door is opened. The enclosure door is locked with a padlock. The lock key has a single cylinder.

TITAN

Metallic shells

Advantages

- Welded enclosure, fully welded seams.
- Possibility of installing blanking plates.
- Protective visor and protective groove in IP54 enclosures prevent the ingress of dirt and water when opening the door.
- Increased usable mounting area.
- Removable cable glands facilitate entry of conductors into the switchboard.
- Wide range of accessories.
- The visual difference between the PRO metal enclosures with mounting panel is the faceted angles.
- High level of electrical safety.
- High quality coating.
- Increased corrosion resistance.
- When installing dust and moisture-proof fittings with the possibility of sealing on the lock, the IP54 enclosure reaches the IP65 degree of protection.
- Full set.
- One safety lock.

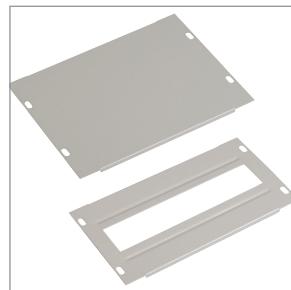

Specifications

Installation type	wall-mounted
Metal thickness	1.0 mm – for metal enclosures with mounting panel of the first 3 sizes; 1.4 mm – for metal enclosures with mounting panel above the 3rd size
Rated current	up to 630 A
Cover type	powder, shagreen
Color	EPK RAL 7035 for IP31; PPK RAL 7035 for IP54
Degree of protection	IP31, IP54
Door opening angle	105°
Apparatus type	any
Climatic modification	NF3 for IP31, N1 for IP54

Design features

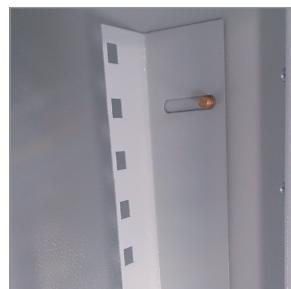

Welded enclosure, fully welded seams – complete tightness of the board.

Possibility of installing metal blanking plates (LG panels – front solid plates and LMA – front plates for modular automations). Belong to accessories and must be ordered separately.

Protective visor and protective groove in IP54 enclosures – protection of electrical equipment from moisture penetration.

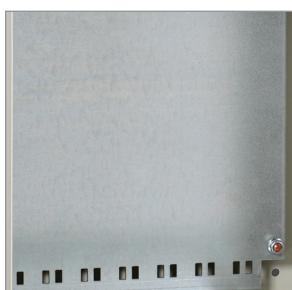

The angle allows you to adjust the installation depth of the LG and LMA panels.

The visual difference of the PRO metal enclosures with mounting panel is the faceted angles.

When installing dust and moisture-proof fittings with the possibility of sealing (article YZZ-22-33), the degree of protection IP65 is achieved.

Increased usable area of the galvanized mounting panel, perforation for cable ties.

In IP54 version, polyurethane foam seal around the door perimeter.

Removable cable glands – easy access to equipment during installation.

3 hinges for reinforcement of the door of the PRO metal enclosure with mounting panel above size 3.
3 locks for a tighter fit of the door in the PRO metal enclosures with mounting panel above size 5.

Component parts

- Electrical safety signs.
- Kit for enclosure grounding and mounting.
- Rubberized rings for IP54 protection at the attachment points.

Metal enclosure with mounting panel-5-2 N1 IP54 PRO	Number of inputs: 3 holes 171×92 mm (bottom). Weight 35 kg. The total height of the panels LG/LMA – 950 mm	Enclosure: 1000×650×286/293*. Panel: 975×585×15	YKM42-05-54-P
---	---	--	---------------

Metal enclosure with mounting panel-6-2 N1 IP54 PRO	Number of inputs: 3 holes 171×92 mm (bottom). Weight 41 kg. The total height of the panels LG/LMA – 1150 mm	Enclosure: 1200×650×286/293 Panel: 1175×585×15	YKM42-06-54-P
---	--	---	---------------

Metal enclosure with mounting panel-7-2 N1 IP54 PRO	Number of inputs: 3 holes 171×92 mm (bottom). Weight 47 kg. The total height of the panels LG/LMA – 1350 mm	Enclosure: 1400×650×286/293*. Panel: 1375×585×15	YKM42-07-54-P
---	--	---	---------------

* The depth of the enclosure, including the visor.

Accessories for PRO metal enclosures with mounting panel*

LG panel

LMA panel

Front panel angle

Name	Purpose	Place of installation	Quantity of modules	Overall dimensions, mm	Color	Article
LG panel for metal enclosure with mounting panel-1 36 PRO/GARANT H=50 (set 2 pcs.)	For protection against direct contact with live parts	Inside the enclosure on the angles of the front panel		50×260×8,5	RAL 7035	Y-PL-G-36-1-0-50
LG panel for metal enclosure with mounting panel-1 36 PRO/GARANT H=150 (set 2 pcs.)				150×260×8,5	RAL 7035	Y-PL-G-36-1-0-150
LG panel for metal enclosure with mounting panel-1 36 PRO/GARANT H=200 (set 2 pcs.)				200×260×8,5	RAL 7035	Y-PL-G-36-1-0
LG panel for metal enclosure with mounting panel-2 36 PRO/GARANT H=150 (set 2 pcs.)				150×350×8,5	RAL 7035	Y-PL-G-36-2-0-150
LG panel for metal enclosure with mounting panel-2 36 PRO/GARANT H=300 (set 2 pcs.)				300×350×8,5	RAL 7035	Y-PL-G-36-2-0
LG panel for metal enclosure with mounting panel-3 36 PRO/GARANT H=150 (set 2 pcs.)				150×450×8,5	RAL 7035	Y-PL-G-36-3-0-150
LG panel for metal enclosure with mounting panel-3 36 PRO/GARANT H=450 (set 2 pcs.)				450×450×8,5	RAL 7035	Y-PL-G-36-3-0
LG panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT H=50 (set 2 pcs.)				50×600×8,5	RAL 7035	Y-PL-G-36-4567-1-0
LG panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT H=150 (set 2 pcs.)				150×600×8,5	RAL 7035	Y-PL-G-36-4567-2-0
LG panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT H=300 (set 2 pcs.)				300×600×8,5	RAL 7035	Y-PL-G-36-4567-3-0
LG panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT H=400 (set 2 pcs.)				400×600×8,5	RAL 7035	Y-PL-G-36-4567-4-0
LG panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT H=500 (set 2 pcs.)				500×600×8,5	RAL 7035	Y-PL-G-36-4567-5-0
LMA panel for metal enclosure with mounting panel-1 36 PRO/GARANT (set 2 pcs.)	For protection against direct contact with live parts	Inside the enclosure on the angles of the front panel	12	150×260×8,5	RAL 7035	Y-PL-O-36-5-0
LMA panel for metal enclosure with mounting panel-2 36 PRO/GARANT (set 2 pcs.)			17	150×350×8,5	RAL 7035	Y-PL-O-36-6-0
LMA panel for metal enclosure with mounting panel-3 36 PRO/GARANT (set 2 pcs.)			22	150×450×8,5	RAL 7035	Y-PL-O-36-3-0
LMA panel for metal enclosure with mounting panel-4 (5, 6, 7) 36 PRO/GARANT (set 2 pcs.)			27	150×600×8,5	RAL 7035	Y-PL-O-36-4567-0
Angle of the front panel of the metal enclosure with mounting panel-1 PRO (set 2 pcs.)	For fixing the LG and LMA panels (with the ability to adjust the LG and LMA panels in depth)	Studs inside the enclosure		324×49×36	galvanized	Y-PL-U-1-0
Angle of the front panel of the metal enclosure with mounting panel-2 PRO (set 2 pcs.)				424×49×36	galvanized	Y-PL-U-2-0
Angle of the front panel of the metal enclosure with mounting panel-3 PRO (set 2 pcs.)				574×49×36	galvanized	Y-PL-U-3-0
Angle of the front panel of the metal enclosure with mounting panel-4 PRO (set 2 pcs.)				724×49×36	galvanized	Y-PL-U-4-0
Angle of the front panel of the metal enclosure with mounting panel-5 PRO (set 2 pcs.)				924×49×36	galvanized	Y-PL-U-5-0
Angle of the front panel of the metal enclosure with mounting panel-6 PRO (set 2 pcs.)				1124×49×36	galvanized	Y-PL-U-6-0
Angles of the front panel of the metal enclosure with mounting panel-7 PRO (set 2 pcs.)				1324×49×36	galvanized	Y-PL-U-7-0

Metallic shells

TITAN

* Accessories must be ordered separately. The set of all accessories includes hardware for their installation.

TITAN

Metal enclosures with mounting panel

Used to assemble a variety of electrical panels: power, control, automation. They allow installation of both modular and conventional equipment.

Welded metal enclosure with removable galvanized mounting panel. The enclosure door is locked with a padlock. The lock key has a single cylinder. IP 54 metal enclosures with mounting panel have a two-component sealant seal and a dust and moisture proof lock on the door.

TITAN

Advantages

- Increased corrosion resistance.
- High quality coating.
- One safety lock.
- Set of accessories.
- High manufacturability and ease of assembly.
- Ease of installation.
- Several colors of painting.
- High level of electrical safety.
- Certificate of conformity.

Specifications

Installation type	wall-mounting, flush-mounting
Metal thickness	1.0-1.4 mm (depending on size)
Rated current	up to 630 A
Cover type	powder, shagreen
Color	EPK RAL 7035 – for IP31, PPK RAL 7035 – for IP54
Degree of protection	IP31, IP54
Door opening angle	105°
Apparatus type	any
Climatic modification	NF3 for IP31, N2 for IP54

Explanation of designations

Metal enclosure with mounting panel-1-0 36 NF3 IP31

1 – enclosure size (H×W)
0 – modification
3 – type of coating
3 – EPR/shagreen
6 – paint color
6 – RAL 7035 
NF3 – climatic modification
IP31 – degree of protection

Metal enclosure with mounting panel-2.3.1-0 36 NF3 IP31

2.3.1. – dimensions H×W×D, mm
 Height – **2** – 250 mm
3 – 300 mm
4 – 400 mm
6 – 600 mm
16 – 1600 mm (excl. base – 100 mm)
18 – 1800 mm (excl. base – 100 mm)
 Width – **2** – 210 mm
3 – 300 mm
4 – 400 mm
6 – 600 mm
8 – 800 mm
 Depth – **1** – 150 mm
2 – 250 mm
4 – 400 mm
0 – modification number
3 – type of coating
3 – EPR/shagreen
6 – paint color
6 – RAL 7035 
NF3 – climatic modification
IP31 – degree of protection

Design features

In the IP54 version, the multi-faceted protective channel of the enclosure prevents the ingress of dirt and water when the door is opened.

In IP54 version, the seal is made of polyurethane foam.

Removable rear wall in sizes 16 (18).6.4 and 16(18).8.4 greatly simplifies maintenance and installation of electrical equipment.

Feet on the rear wall in sizes 16(18).6.4 and 16(18).8.4 simplify its installation and increase the safety of cabinet maintenance.

Robotic welding.
Continuous welding of seams is a guarantee of stable quality and high competitiveness of the product.
7 basic sizes of wall-mounted metal enclosures with mounting panel IP54.

Assortment

Metal enclosures with mounting panel (IP31)	Name	Specifications	Article
	Metal enclosure with mounting panel-1-1 36 NF3 IP31	Enclosure, mm 395×310×150. Panel, mm: 330×250. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 5.2 kg	YKM41-01-31
	Metal enclosure with mounting panel-2-1 36 NF3 IP31	Enclosure, mm 500×400×150. Panel, mm: 430×340. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 8.0 kg	YKM41-02-31
	Metal enclosure with mounting panel-3-1 36 NF3 IP31	Enclosure, mm 650×500×150. Panel, mm: 580×440. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 12.2 kg	YKM41-03-31
	Metal enclosure with mounting panel-1-0 36 NF3 IP31	Enclosure, mm 395×310×220. Panel, mm: 330×250. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 6.0 kg	YKM40-01-31
	Metal enclosure with mounting panel-2-0 36 NF3 IP31	Enclosure, mm 500×400×220. Panel, mm: 430×340. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 9.0 kg	YKM40-02-31
	Metal enclosure with mounting panel-3-0 36 NF3 IP31	Enclosure, mm 650×500×220. Panel, mm: 580×440. Number of inputs: 3 holes Ø31 mm (bottom). Weight: 13.5 kg	YKM40-03-31
	Metal enclosure with mounting panel-4-0 36 NF3 IP31	Enclosure, mm 800×650×250. Panel, mm: 730×585. Number of inputs: 4 holes Ø31 mm (bottom). Weight: 20.9 kg	YKM40-04-31
	Metal enclosure with mounting panel-5-0 36 NF3 IP31	Enclosure, mm 1000×650×300. Panel, mm: 930×585. Number of inputs: 5 holes Ø31 mm (bottom). Weight: 26.8 kg	YKM40-05-31
	Metal enclosure with mounting panel-6-0 36 NF3 IP31	Enclosure, mm 1200×750×300. Panel, mm: 1130×685. Number of inputs: 6 holes Ø31 mm (bottom). Weight: 42.0 kg	YKM40-06-31

Bar 30×745 (galvanized) for metal enclosure with mounting panel-16.8.4**			30×745	set	2	YKM40-P-30X745

* Accessories must be ordered separately. The set of all accessories includes hardware for their installation.

** Compatible with metal enclosure with mounting panel-18.X.X.

TITAN

Metal enclosures with mounting panel

TITAN metal enclosures with mounting panel are a new technological product manufactured on modern automated European equipment.

They are designed to ensure reliable protection of equipment in power distribution systems and automation of technological processes, as well as for placement and protection of various electrical and electronic components from environmental influences.

The TITAN metal enclosures with mounting panel are manufactured in Russia from high quality materials in accordance with the most modern requirements.

The unique design of the enclosure is reliable in operation.

Metallic
shells

Advantages

- Impact resistance IK10.
- Increased corrosion resistance – TITAN 7 enclosures are primed and then painted.
- Seismic and vibration resistance.
- High manufacturability and ease of assembly.
- Convenience of installation.
- High electrical safety.
- Certificate of conformity.

Specifications

Installation type	wall-mounted
Rated current	up to 630 A
Cover type	powder, shagreen
Color	RAL 7035 (gray)
Door opening angle	105°
Apparatus type	any

Explanation of the article

TI7-10-N-060-050-020-66

TI7 - TITAN 7 series designation
1 - number indicating the standard version,
1 - metal enclosure with mounting panel
0 - modification designation,
0 - no modification (standard product)
N - mounting type,
N - wall mounting
060 - height, cm (060 – 60 cm)
050 - width, cm (050 – 50 cm)
020 - depth, cm (020 – 20 cm)
66 - IP rating

Explanation of designations

Metal enclosure with mounting panel-60.50.20 NF3 IP31

60 - height, cm
50 - width, cm
20 - depth, cm
NF3 - climatic version
IP31 - IP rating

Assortment

Metal enclosures with mounting panel with a transparent door

IP54 metal enclosures with mounting panel with a transparent door IEK® are designed for the assembly of automation, signaling and control cabinets, power electrical equipment for various purposes in any industry, in agriculture, commercial and private housing construction.

Welded metal enclosure with removable galvanized mounting panel.

The enclosure door is locked with a padlock. The lock key has a single cylinder.

The door has a two-component polyurethane seal and a dust and moisture resistant lock.

Advantages

- Impact resistant tempered glass according to IK08 standard
- Fully robotic welding. Continuous welding of seams.
- Increased corrosion resistance.
- One lock cylinder.
- High manufacturability and ease of assembly.
- Convenience of installation.
- High electrical safety.
- Certificate of conformity.
- Mounting panel 1.5 mm thick.

Specifications

Installation type	wall-mounted
Metal thickness	1.0-1.4 mm (depending on size)
Rated current	up to 630 A
Cover type	powder, shagreen
Color	RAL 7035 (gray)
Degree of protection	IP54
Door opening angle	105°
Apparatus type	any
Climatic modification	N2

Design features

Tempered glass.

Mounting panel 1.5 mm thick.

Reinforced inner glass frame.

Robotic welding.

Explanation of designations

Metal enclosure with mounting panel-1-0 N2 IP54 with transparent door

1 - enclosure size (HxW)
0 - modification
N2 - climatic modification
IP 54 - degree of protection
Transparent door - door with transparent tempered glass IK08

Scope of Delivery

Mounting panel
 IP54 lock
 Set of glands for cable entry
 Enclosure mounting kit
 Ground wire
 Electrical safety signs

Assortment

Name	Overall dimensions, mm (H×W×D)	Weight, kg	Article
	Metal enclosure with mounting panel-1-0 N2 IP54 with transparent door Enclosure, mm 395×310×220. Panel, mm: 330×250. Number of inputs: 11 holes Ø31 mm (bottom).	6.6	YKM11-01-54-1

Red metal enclosures with mounting panel IP54 for automatic fire fighting equipment

Metal enclosures with mounting panel IP54 RAL 3020 IEK® are intended for assembly of fire control cabinets, fire pump control cabinets, fire alarm cabinets, as well as other low-voltage switchboards of any complexity for currents up to 630 A.

Welded metal enclosure with removable galvanized mounting panel.

The enclosure door is locked with a padlock. The lock key has a single cylinder.

The door has a two-component polyurethane seal and a dust and moisture resistant lock.

Advantages

- Color Powder coating RAL 3020 red.
- Fully robotic welding. Continuous welding of seams.
- Increased corrosion resistance.
- One safety lock.
- High manufacturability and ease of assembly.
- Ease of installation.
- High electrical safety.
- Certificate of conformity.
- Mounting panel 1.5 mm thick.

Specifications

Installation type	wall-mounted
Metal thickness	1.0-1.4 mm (depending on size)
Rated current	up to 630 A
Cover type	powder, shagreen
Color	PPK RAL 3020 red
Degree of protection	IP54
Door opening angle	105°
Apparatus type	any
Climatic modification	N2

Design features

Powder coating
RAL 3020 red.

Robotic welding.
Continuous welding of seams
is a guarantee of stable
quality and high
competitiveness
of the product.

Mounting panel 1.5 mm thick.
Allows you to attach heavy
equipment.

Explanation of designations

Metal enclosure with mounting panel-1-0 N2 IP54 RAL 3020

1 – enclosure size (HxW)
0 – modification
N2 – climatic modification
IP 54 – IP rating
RAL 3020 – red

Scope of Delivery

Mounting panel
IP54 lock
set of glands for cable entry
board mounting kit
ground wire
electrical safety signs

Metal enclosure with mounting panel-1-0 N2 IP54 RAL 3020	Enclosure, mm 395×310×220. Panel, mm: 330×250. Number of inputs: 11 holes Ø31 mm (bottom). Weight: 6,5 kg	RAL 3020	IND-YKM40-01-54
Metal enclosure with mounting panel-2-0 N2 IP54 RAL 3020	Enclosure, mm 500×400×220. Panel, mm: 430×340. Number of inputs: 11 holes Ø31 mm (bottom). Weight: 9.5 kg	RAL 3020	IND-YKM40-02-54
Metal enclosure with mounting panel-3-0 N2 IP54 RAL 3020	Enclosure, mm 650×500×220. Panel, mm: 580×440. Number of inputs: 13 holes Ø31 mm (bottom). Weight: 13.9 kg	RAL 3020	IND-YKM40-03-54
Metal enclosure with mounting panel-4-0 N2 IP54 RAL 3020	Enclosure, mm 800×650×250. Panel, mm: 730×585. Number of inputs: 1 holes 523×123 mm (bottom). Weight: 27.8 kg	RAL 3020	IND-YKM40-04-54
Metal enclosure with mounting panel-5-0 N2 IP54 RAL 3020	Enclosure, mm 1000×650×285. Panel, mm: 930×585. Number of inputs: 1 holes 523×123 mm (bottom). Weight: 34.8 kg	RAL 3020	IND-YKM40-05-54
Metal enclosure with mounting panel-6-0 N2 IP54 RAL 3020	Enclosure, mm 1200×750×300. Panel, mm: 1130×685. Number of inputs: 1 holes 523×123 mm (bottom). Weight: 46.2 kg	RAL 3020	IND-YKM40-06-54
Metal enclosure with mounting panel-7-0 N2 IP54 RAL 3020	Enclosure, mm 1400×650×285. Panel, mm: 1330×585. Number of inputs: 1 holes 523×123 mm (bottom). Weight: 46.6 kg	RAL 3020	IND-YKM40-07-54

TITAN

All-welded metal assembling enclosures for incoming and distribution switchboard

Metal assembling enclosures for incoming and distribution switchboard are designed to receive, distribute and meter electricity with a voltage of 400/230 V in three-phase alternating current networks with a frequency of 50 Hz, to protect lines from short-circuit currents and overloads, as well as for infrequent operational switching on and off.

The TITAN metal assembling enclosures for incoming and distribution switchboard IEK® is an all-welded frame made of sheet steel with increased corrosion resistance (base in the complete set). Due to special production technologies, all-welded enclosures have rigidity and mechanical strength that are unique for the modern LVE market.

The area of application of the metal assembling enclosures for incoming and distribution switchboard is civil construction and industrial enterprises.

Advantages

- Application of modern technologies – additional rigidity of the structure.
- Available in the range of enclosures with a degree of protection IP54.
- Large selection of additional accessories made of galvanized steel.
- Increased functionality.
- Wide range.
- Possibility of re-hanging the door.
- Increased corrosion resistance.
- High level of electrical safety.
- High manufacturability and ease of assembly.
- Certificate of conformity.

Specifications

Installation type	floor
Metal thickness	1.4 mm
Degree of protection	IP31, IP54
Rated current	up to 1000 A
Cover type	powder, shagreen
Color	EPK RAL 7035 – for IP31, PPK RAL 7035 – for IP54
Climatic modification	NF3 for IP31, N2 for IP54
Door opening angle	130°
Input of conductors	bottom

Design features

Possibility to adjust the installation depth of the mounting panel.

Moving the door to either side.

In the metal assembling enclosure for incoming and distribution switchboard IP54, there is the possibility of convenient cable entry. A special removable panel is installed in the lower wall (bottom) of the metal assembling enclosure for incoming and distribution switchboard.

Pocket on the door for storing documents.

Eyebolts allow slinging of the product.

The set of all accessories includes hardware for installation in the enclosure.

The total height covered by the LG/LMA panels is equal to the height of the frame (H) minus 50 mm.

Metallic shells

TITAN

Explanation of designations

Full-weld floor cabinet of **TITAN metal assembling enclosure for incoming and distribution switchboard-1 20.80.60 IP31**

1 – version with one door

20 – height 2000 mm (excluding the base – 70 mm)

80 – width 800 mm

60 – depth 600 mm

IP31 – IP rating

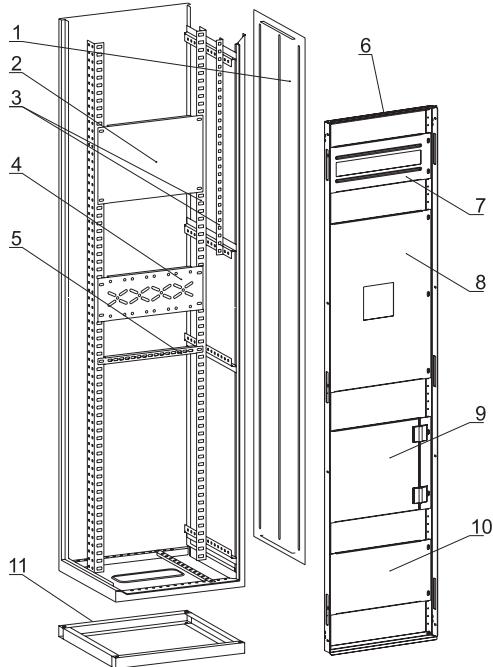

TITAN – series name

Scope of Delivery

- TITAN metal assembling enclosure for incoming and distribution switchboard
- grounding sign
- sign "Caution! Electric voltage"
- product data sheet
- ground wire with fasteners
- base

Assortment

Accessories for TITAN* metal assembling enclosures for incoming and distribution switchboard

1 – Side panel
 2 – mounting panel
 3 – Vertical angle
 4 – PN panel
 5 – Bar
 6 – Frame for LG/LMA panels for metal assembling enclosures for incoming and distribution switchboard
 7 – LMA panel for metal assembling enclosures for incoming and distribution switchboard
 8 – VA 88-35 panel for metal assembling enclosures for incoming and distribution switchboard
 9 – Operative rotary panel SMART
 10 – LG panel for metal assembling enclosures for incoming and distribution switchboard
 11 – Base

Selection table of accessories for TITAN metal assembling enclosures for incoming and distribution switchboard

Name	Purpose	Installation place	Overall dimensions, mm	Completeness unit of measurement	Article
Side panel for metal assembling enclosure for incoming and distribution switchboard 18.XX.45 IP31 TITAN	Closes the side openings of the metal assembling enclosure for incoming and distribution switchboard frames, provides electrical safety and prevents the penetration of foreign objects into the shield	Metal assembling enclosure for incoming and distribution switchboard 18.XX.45	27×1720×385	set	2 YKV10-PB-1845-31

SMART

Collapsible metal assembling enclosures for incoming and distribution switchboards

Metal assembling enclosures for incoming and distribution switchboards are designed to receive, distribute and meter electricity with a voltage of 400/230 V in three-phase alternating current networks with a frequency of 50 Hz, to protect lines in case of short circuits and overloads, as well as for infrequent operational switching on and off.

SMART IEK® metal assembling enclosures for incoming and distribution switchboards are used for further assembly on their basis of input-distribution low-voltage complete devices intended for power supply of various objects. On the basis of SMART metal assembling enclosure for incoming and distribution switchboard it is possible to assemble most of the existing LVCD circuits.

SMART

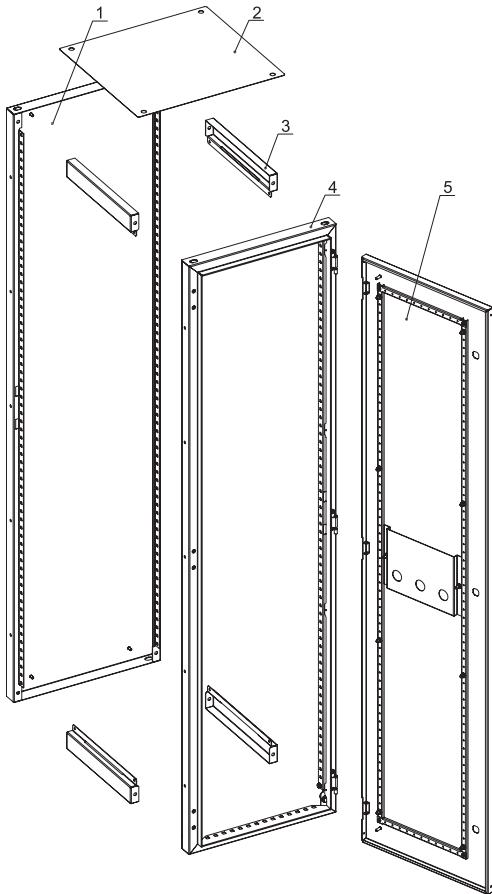

Advantages • High manufacturability and ease of assembly.

- Possibility of installing blanking plates.
- Convenience of installation, transportation and storage.
- A wide range of accessories, the ability to divide the space into compartments.
- Possibility of installing accessories at different depths (20 mm steps), widths (25 mm steps) and heights (25 mm steps).
- Improved enclosure design provides more efficient use of workspace.
- Removable side panels provide easy access to equipment during installation.
- High quality coating.
- Reversible door.
- Profile on the door for the installation of lighting equipment.
- Increased corrosion resistance.
- Possibility of connecting enclosures into blocks.
- High level of electrical safety.
- Pocket for documents.
- Ground studs on the door.
- Certificate of conformity.

Specifications

Metal thickness, mm	1.4
Rated current, A	630
Degree of protection	IP31, IP54
Climatic modification	NF3, N2
Degree of protection	IP54
Installation type	floor
Apparatus type	any
Cover type	EPA powder, shagreen
Color	RAL 7035
Door opening angle	120°

Design features

The total height covered by the LG/LMA panels is equal to the height of the enclosure minus 100 mm.

- 1 – Back wall
- 2 – Roof
- 3 – Coupler – 4 pcs.
- 4 – Front frame
- 5 – Door

Explanation of designations

- metal assembling enclosure for incoming and distribution switchboard
- height
- width
- depth
- IP rating
- series name

Scope of Delivery

- SMART metal assembling enclosure for incoming and distribution switchboard
- grounding sign
- sign "Caution! Electric voltage"
- product data sheet
- complete set of hardware for assembly

Assortment

Accessories

The purpose and place of installation of accessories can be found on the website www.iek.ru in the section Installation and Operation Manual for the SMART metal assembling enclosure for incoming and distribution switchboard.

- 1 – Mounting panel XXXxxxxx SMART
- 2 – Side rail for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 3 – Mounting panel XXXxxxxx SMART
- 4 – Rail XXX for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 5 – Crossbar XXX for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 6 – Double-row crossbar SMART
- 7 – Single-row crossbar SMART
- 8 – Frame for LG/LMA panels for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx (H = XXX) SMART*
- 9 – LMA panel for metal assembling enclosure for incoming and distribution switchboard-x xx.xx.xx xx TITAN (H = xxx)*
- 10 – Side panel for metal assembling enclosure for incoming and distribution switchboard XXXX.XXX.XXX SMART
- 11 – Panel VA 88-35 to metal assembling enclosure for incoming and distribution switchboard-x xx.xx.xx xx TITAN (H = 550)*
- 12 – Operative rotary panel SMART (H=XXX)*
- 13 – LG Panel for metal assembling enclosure for incoming and distribution switchboard-x xx.xx.xx xx TITAN (H = xxx)*
- 14 – Cross profile XXX for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 15 – base of metal assembling enclosure for incoming and distribution switchboard xx.xx.xx*
- 16 – Bracket for N/PE busbars SMART
- 17 – Side U-profile for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 18 – Partition 450xXXX for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx SMART
- 19 – Bracket-xx for DIN-rail SMART
- 20 – Angle for equipment XXX SMART
- 21 – Shelf for metal assembling enclosure for incoming and distribution switchboard XXXxxxxx (H = XXX) SMART
- 22 – Installation plate SMART

* Accessories are suitable for both metal assembling enclosures for incoming and distribution switchboards SMART and metal assembling enclosures for incoming and distribution switchboards TITAN.

SMART

Metal assembling enclosures for main distribution switchboards
IP31 for currents up to 1600 A

Metal assembling enclosures for main distribution switchboard SMART IEK® are designed for assembly on their basis of main switchboards for currents up to 1600 A, using air-insulated circuit breakers, molded case circuit breakers and modular power equipment.

The metal assembling enclosures for main distribution switchboard s are designed to receive, distribute and protect branch lines in three-phase AC 400/230 V.

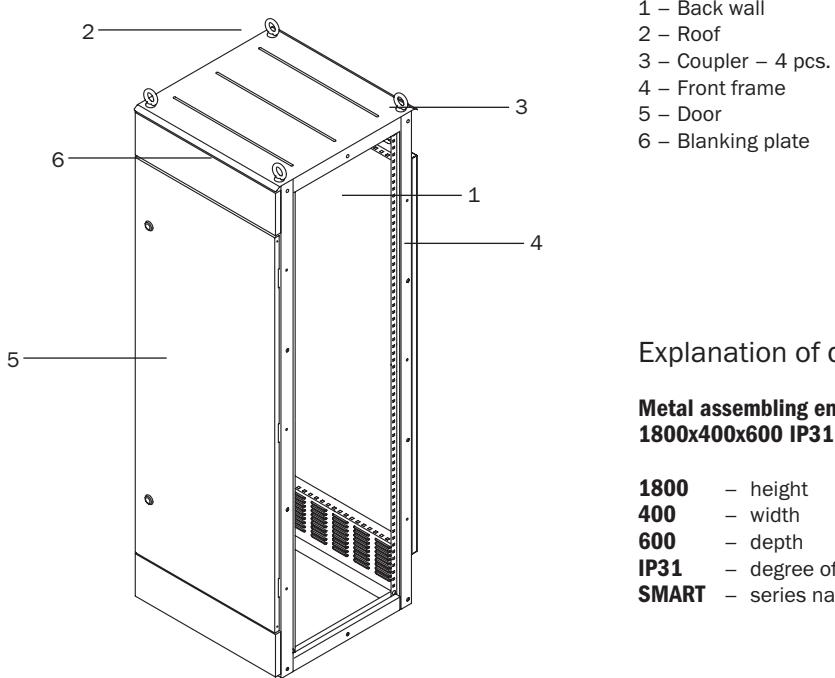

**Advantages**

- High manufacturability and ease of assembly.
- Possibility of installing blanking plates.
- Convenience of installation, transportation and storage.
- Wide range of accessories, the ability to divide the space into compartments.
- Possibility of installing accessories at different depths (20 mm steps), widths (25 mm steps) and heights (25 mm steps).
- Improved enclosure design provides more efficient use of workspace.
- Removable side panels provide easy access to equipment during installation.
- High quality coating.
- Reversible door.
- Profile on the door for the installation of lighting equipment.
- Increased corrosion resistance.
- Possibility of connecting enclosures into blocks.
- High level of electrical safety.
- Pocket for documents.
- Ground studs on the door.
- Certificate of conformity.

Specifications

Enclosure metal thickness, mm	2
Rated current, A	up to 1600
Cover type	powder, shagreen
Color	RAL 7035
Degree of protection	IP31
Door opening angle	120°
Apparatus type	any
Climatic modification	NF3
Installation type	floor

Design features

Explanation of designations

**Metal assembling enclosure for main distribution switchboard
 1800x400x600 IP31 NF3 SMART IEK**

1800 – height
400 – width
600 – depth
IP31 – degree of protection
SMART – series name

Large-size dismountable metal enclosures

Used for the assembly of low-voltage complete devices: metal assembling enclosure for main distribution switchboards, metal assembling enclosure for incoming and distribution switchboards, control and automation cabinets.

They have a collapsible absolutely symmetrical frame made of a perforated profile, to which the door, side panels, rear wall, roof and base are attached. Inside the enclosure, you can install various components: mounting panels, support rails, strips, angles, DIN rails, etc. for the subsequent attachment to them of electrical devices, busbars, electrical products and accessories.

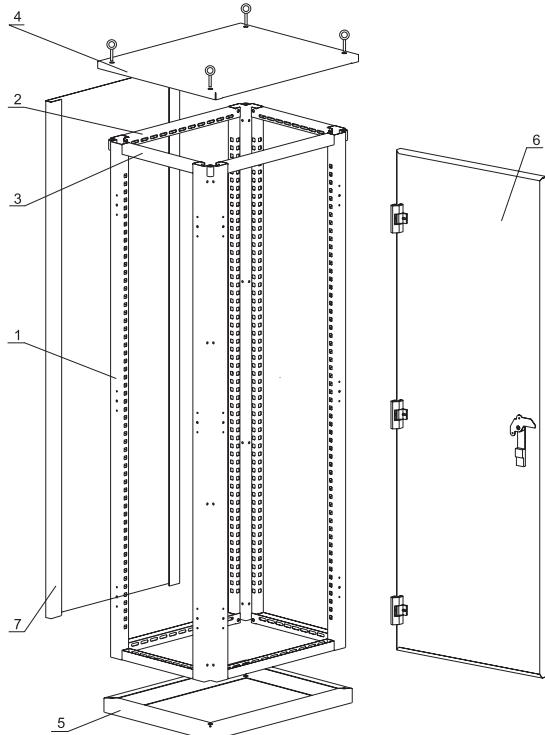

Advantages

- Universal design.
- Moving the door to either side.
- Joining enclosures into blocks.
- Increased corrosion resistance.
- High quality outer cover.
- A set of additional accessories.
- High manufacturability and ease of assembly.
- Convenience of installation, transportation and storage.
- High level of electrical safety.

Specifications

Installation type	floor
Rated current	630 A
Metal thickness	1.4 mm
Cover type	powder, shagreen
Color	RAL 7035
Degree of protection	IP31
Door opening angle	160°
Apparatus type	any

Design features

- 1 – Vertical galvanized racks – 4 pcs.
- 2 – Front braces – 4 pcs.
- 3 – Side braces – 4 pcs.
- 4 – Roof – 1 pc.
- 5 – Base – 1 pc.
- 6 – Door – 1 pc.
- 7 – Back wall – 1 pc.

Completeness of individual elements (places)

Place 1

Vertical racks.

Place 2

Roof, base, side and front braces, lock, hinges, hardware, data sheet and assembly instructions.

Place 3

Door, back wall.

* Accessories must be ordered separately. The set of all accessories includes hardware for their installation.

Metal enclosures for distribution points

Scope of application – industrial and production facilities.

Used for the assembly of distribution points (series PR11), intended for receiving and distributing electricity, protecting electrical installations with a voltage of 400/230 V during overloads and short-circuit currents, as well as infrequent (no more than 6 per hour) switching on and off of electrical circuits.

Advantages

- Universal design.
- Increased corrosion resistance.
- High quality coating.
- Set of accessories.
- Electrical safety signs set.
- High manufacturability and ease of assembly.
- Ease of installation.
- High level of electrical safety.
- Certificate of conformity.
- Aesthetics and design.

Specifications

Installation type	wall-mounted
Rated current	up to 630 A
Metal thickness	1.0-1.4 mm
Cover type	powder, shagreen
Color	RAL 7035
Degree of protection	IP31, IP54
Door opening angle	105°
Climatic modification	NF3 for IP31, N2 for IP54

Description of the structure

Solid welded enclosure, inside of which there are an operational panel, a panel for an input device, DIN rails for group electrical devices and elements for fixing power buses, as well as N and PE buses. The enclosure door is locked. In IP54 enclosures, a two-component sealant seal is applied to the door.

There are three sizes depending on the enclosure size. Recommended devices for the assembly of electrical panels:

- as an input – IEK® circuit breakers, VA88 series with electromagnetic and thermal releases for rated currents of 160, 250, 400, 630 A;
- on output lines – automatic circuit breakers VA47-100 for rated currents from 10 to 100 A.

In the enclosures of modification "3" there are two main differences that make these enclosures more convenient to use and

versatile.

Firstly, it became possible to enter conductors from above, which significantly expands the possibilities of application and ease of use. Input is carried out using an additional input panel with a hermetically sealed polyurethane foam seal (IP54 version) (Fig. 1).

Secondly, in the enclosures, it is possible to install VA88 series automation of size 32 and 33 on output lines using additional mounting adapter panels.

The panels are perforated for the installation of automation without the use of additional tools.

These modifications greatly simplify the assembly and further operation of the panels.

Fig. 1

Component parts

The enclosure complete with an operational panel – 1pc.

Electrical safety signs – 3 pcs.

Assembly instruction – 1 pc.

Data sheet – 1 pc.

Marking plates – 2 pcs.

* The delivery set of the busbars includes all the necessary fasteners for their installation in the metal enclosure for distribution points and for connecting external conductors, as well as SM insulators.

Metal assembling enclosures with one-side maintenance possibility

The metal assembling enclosure with one-side maintenance possibility are designed for completing switchgears with a voltage of 230/400 V of three-phase alternating current with a frequency of 50 Hz in networks with a solid-grounded neutral in four-wire and five-wire versions, serving for the reception and distribution of electrical energy, protection of outgoing lines from overloads and short-circuit currents.

The metal assembling enclosures with one-side maintenance possibility represent a collapsible frame made of vertical racks, vertical angles, side and front braces, to which the door, side panels, roof are attached (side panels and roof should be ordered separately).

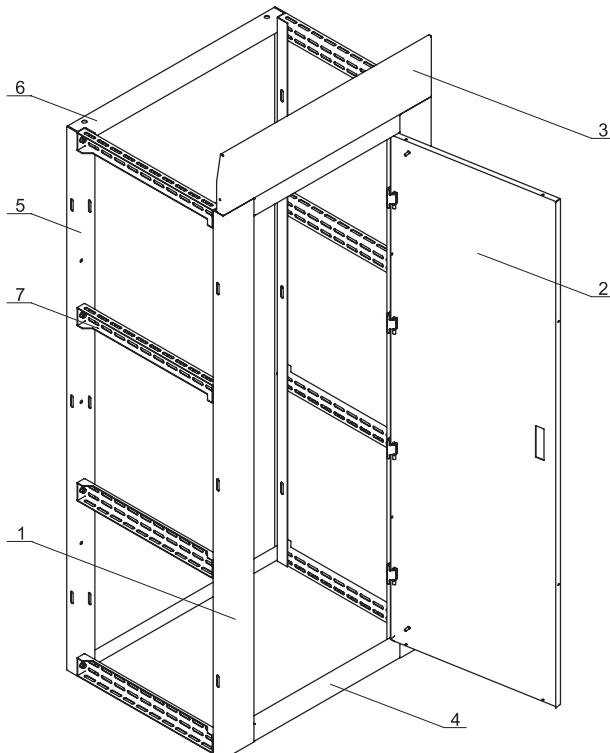

Advantages

- Increased corrosion resistance.
- Wide range.
- High quality coating.
- Unified parts simplify the assembly of both a typical low-voltage complete device and a non-standard one.
- Moving the door to either side.
- Set of accessories.
- The prefabricated structure of the panel enclosure saves space in transport and warehouse.
- Wide racks allow installing signaling and control equipment on their front surface.
- High manufacturability and ease of assembly.
- Convenience of installation, transportation and storage.
- Joining enclosures into units.

Specifications

Installation type	floor
Rated current	up to 2500 A
Rated voltage	0.4 kV
Metal thickness	2.0 mm
Cover type	powder
Color	RAL 7035
Degree of protection	IP20 (from the front side); IP00
Door opening angle	105°
Climatic modification	NF3

Design features

1 – Vertical rack
 2 – Door
 3 – Front panel (comes with the enclosure)
 4 – Front coupler
 5 – Vertical angle
 6 – Horizontal angle
 7 – Side coupler

Use of flanges on vertical racks and vertical angles, preventing axial rotation of side ties, allows using half the number of fastening elements for assembly compared to the previous design.

Possibility to re-hang the door.

Panel for measuring instruments.

Possibility to install a roof with eyebolts.

Explanation of designations

Metal assembling enclosure with one-side maintenance possibility XX.XX.X

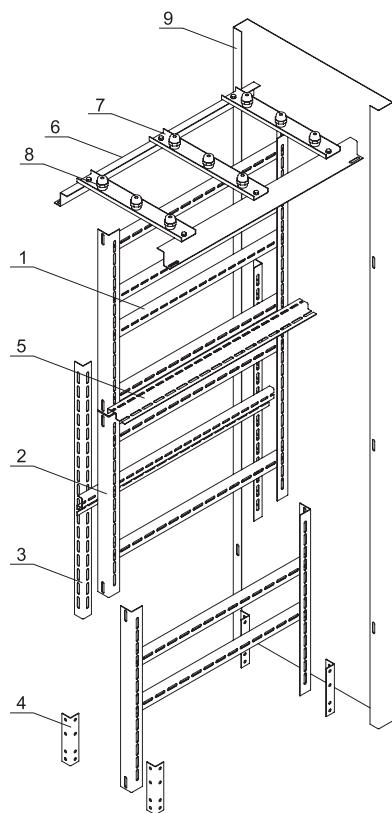

XX – height, dm (including the front panel)
XX – width, dm
X – depth, dm

Dismountable metal enclosures for distribution boards

Metal enclosures for distribution boards are used for assembly of power distribution boards intended for receiving and distributing energy.

Advantages

- High manufacturability and ease of assembly.
- Universal design.
- Ease of installation.
- Availability of additional accessories.
- High quality coating.
- Increased corrosion resistance.
- Electrical safety signs set.
- Certificate of conformity.

Specifications

Installation type	floor
Rated current, A	up to 400
Rated voltage	400 V
Metal thickness, mm	1.4
Degree of protection	IP31
Climatic modification	NF3
Apparatus type	any
Cover type	EPK, shagreen
Color	RAL 7022
Door opening angle	180°

Description of the structure

The cabinet consists of a collapsible frameless metal enclosure (ordered by one article, shipped in two places), inside which on mounting panels and rails it is possible to install a VR-32** breaker and fuses** of type PN-2, PPNI, PP-35. The electrical circuits inside the cabinet are made using a set of power copper busbars (referred to as accessories). N and PE buses can also be ordered as an option. The cabinet door is locked. The door can be re-hung for ease of maintenance.

Component parts

Explanation of designations

Metal enclosure for distribution boards-1-0 32 NF3 IP31

1 – enclosure size
0 – modification number
3 – coverage type: EPR/shagreen
2 – paint color RAL 7022
NF3 – climatic version
IP31 – degree of protection

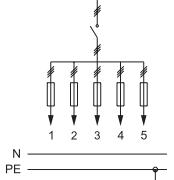

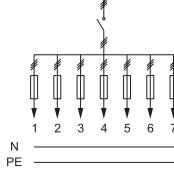

Assortment

Name	Specifications	Article
Metal enclosure for distribution boards-1-0 32 NF3 IP31*	Dimensions, mm: 1600×500×350. Weight, kg: 52	YKM21-01-31

* Items to be ordered.

** Switch VR-32 and fuses (see table 1) must be purchased separately.

FORMAT®

Electrical cabinets

FORMAT® electrical cabinets are used indoors at energy and industrial automation facilities. Used to place electrical equipment on a mounting panel or on an internal prefabricated frame.

FORMAT® cabinets have a frame structure based on closed profiles, perforated in two planes, which allows flexible placement of equipment and components, as well as convenience when joining cabinets in a row when used without side panels.

FORMAT

Advantages

- Fully symmetrical closed profile allows panels and doors to be installed in any lateral plane
- Collapsible construct – ease of installation, transportation and storage
- Convenient coupling of enclosures
- Assembly of a high level of complexity with a maximum partitioning of 3b up to 4000A
- Universal interchangeable accessories
- Unpainted elements have a special anti-corrosion aluzinc coating (Al-Zn)
- Unified fasteners
- European certificates

Specifications

Installation type	floor
Metal thickness	1.5 – 3.0 mm
Rated current	up to 4000 A
Cover type	powder, shagreen
Color	RAL 7035
Degree of protection	IP54
Apparatus type	any
Climatic modification	N2

Design features

The prefabricated structure based on a frame made of closed-section profiles provides a high load capacity of the cabinet. On the mounting panel – 500 kg. On the door – 50 kg. Side/back panel – 50 kg. On the frame (on internal rails) – 1 600 kg.

Doors can be installed both on the right and on the left. If necessary, doors with glass and/or with a ventilation grill can be ordered.

In cabinets of the same width and depth, the back and side walls are interchangeable. All walls are equipped with M8 earthing rods.

The bottom panel is made in the form of three movable plugs. It is possible to remove the bottom panel of the frame together with the plugs, which will allow you to obtain a cable gland with dimensions along the perimeter of the base of the cabinet.

The cabinet can be equipped with a mounting panel that can be fixed at any required depth. The advantage is the possibility of installing the panel in the extreme position of the rear of the cabinet (flush with the frame), which allows optimal use of the usable space.

The components of the cabinet to be grounded are equipped with M8 studs to allow the earthing connection to the frame at the most optimal locations.

Assortment

Mounting plate

NOTE.

After installing the side panels, the cabinet width increases by 5 mm on each side.
Between linearly connected cabinets, it is necessary to provide a gap of 3 mm for the seal.

Glands

Designed for entering wires and cables into switchboard equipment in order to protect conductors from mechanical damage and protect the assembly itself from the penetration of dust and moisture

The gland consists of an enclosure (1), a seal (4), a packing nut (3), a gasket (2) and a fixing nut (5). The gasket and seal are made of neoprene.

The enclosure, packing nut, and retaining nut are nylon.

The gland is installed using a pipe (gas) spanner.

The operating temperature range of PG glands is from -15 to +80°C, of PGL and MG – from -40 to +80°C.

Assortment

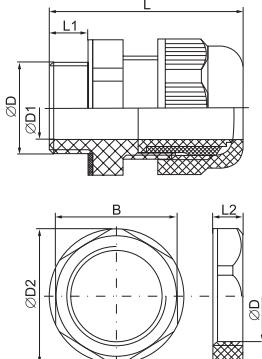

PGL, PG glands

Degree of protection IP54
Color – gray RAL 7035.

Terminals ZNI

They are used for safe and compact connection of phase, neutral and protective (ground) conductors of various cross-sections. Mounted on a DIN rail. Set with a marker for drawing numbers (except for ZNI-2.5 and ZNI-95).

Side plugs for ZNI terminals are also supplied. The terminal clamps can be closed with plastic plugs of the appropriate size and color.

They are made of colored non-combustible polyamide – yellow-green (ground), blue (zero), gray (phase) color.

Spring terminals KPI

Designed for permanent, safe and compact connection of conductors of various cross-sections in distribution systems inside electrical cabinets. They are used for safe and compact connection of phase, neutral and protective (ground) conductors of various cross-sections. Mounted on a DIN rail.

The spring-loaded type of conductor clamp provides fast assembly speed and secure hold under vibration loads. Double functional row of jumpers facilitates the task of potential distribution.

A wide range of accessories for terminal installation: side plugs for terminals in matching colors, labeling plates with and without symbols, end straps, row markers for terminal assembly.

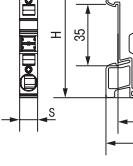

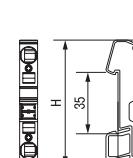

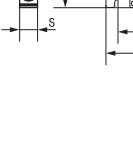

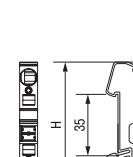

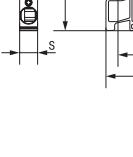

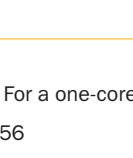

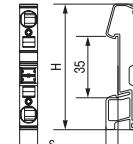

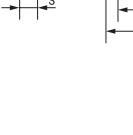

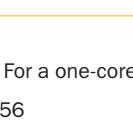

Made of colored non-combustible polyamide – gray (phase), blue (zero), yellow-green (earth) color.

Flammability class according to UL94 – V0.

Rated impulse withstand voltage U_{imp} , V – 6000.

Rated insulation voltage, V – 800.

Input power terminal KVS

Input power terminals are designed to connect large conductors from 6 to 240 mm² when organizing the input and distribution of conductors inside electrical cabinets and switchboards. Used to connect copper and aluminum conductors when installing industrial equipment.

Connection by means of clamps makes installation as simple and fast as possible. Robust enclosure with increased fire resistance, made of polyamide PA 6.6 according to UL94 VO standard (self-extinguishing).

A special paste on the clamping screw and busbar of the terminal increases the contact surface and reduces power loss and heat at the contact point, increasing the life of the terminal.

The connecting piece is tin plated aluminum.

Operating temperature: -40..+85 °C

Flat bus insulators IShP

Designed to hold power busbars in busbar systems inside electrical distribution cabinets and switchboards with rated currents up to 4000 A.

They are used for the orderly organization of bus connections and the installation of various branches from the central buses when assembling low-voltage switchboards for various purposes.

Advantages of IEK® flat busbar insulators:

- Made of glass fiber reinforced SMC material with high flexural and tensile strength. Resistant to dynamic loads in the event of short-circuit currents.
- The insulator is available in two- or three-phase design.
- Provides vertical fastening of 5 and 10 mm busbars.
- Simple and reliable design for quick assembly of busbar systems from copper and aluminum busbars.

Assortment

Name	Number of buses, pcs.	Number in a package, pcs.	Article

Insulators for connecting studs for IShP

Designed for insulating connecting studs when installing flat insulators in a busbar system.

Made in the form of tubes made of fiberglass fabric coated with epoxy resin.

The wide range of sizes allows for use with power busbars of various widths.

Electric buses

Electric copper and aluminum buses

Electrical copper buses M1T are made of high-quality copper grades.

Electrical aluminum buses AD 31T are made of high-quality aluminum grades.

They are used for the manufacture of bus routes, bus ducts of various configurations. They are used in low-voltage switchboards, power supply systems for residential, public and industrial buildings.

Supplied in strips 4 meters long.

Characteristics and selection of ShMG

The recommended amperage value (margin of safety) for the selection of ShMG buses is indicated in Table 1. Recommended to select buses according to this value

The maximum permissible short-term currents for ShMG buses, depending on the temperature loads, are shown in Table 2.

Table 2

* – Amperage based on the maximum temperature in the cabinet 75°C. The permissible current strength of the ShMG is determined by the formula: $\Delta T (°k) = T_2 - T_1$, where: T1 is the temperature inside the cabinet, T2 is the bus temperature. The calculation assumes an ambient temperature of 25°C.

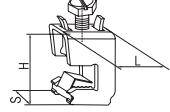

Bus terminals ZShl

Universal clamps (bus terminals)

IEK® universal clamps (terminals) with an additional integrated clamping plate are designed to connect conductors with cross-sections from 1.5 to 120 mm² to flat copper and aluminum buses with a thickness of 5 or 10 mm for subsequent stress relief on the installed equipment. The use of bus clamps eliminates the need for drilling the buses to connect conductors during the assembly of low-voltage switchgear, which significantly saves the time and effort of the assembler, and also reduces the cost of work.

An additional spring plate ensures a secure fixation of the clamp on the busbar and significantly reduces the "self-loosening effect". ZShl bus clamps are highly reliable, made of galvanized steel, resistant to corrosion and temperature. For added convenience, the nominal cross-section of the connected conductor and the maximum tightening torque of the screw are indicated on the clamp enclosure.

The use of an open terminal chamber makes the process of connecting conductors as simple and fast as possible.

	Name	Section, mm ²	Tightening torque of screws (bolts), N/m	H, mm	L, mm	S, mm	Amount in a package, pcs.	Article

Neutral buses

Uninsulated buses are used in switchboard equipment to connect neutral (N) and protective (PE) conductors. The bus is provided in the center (types 8/1; 14/1) and at the edges (types 8/2 and 14/2) through a neutral bus insulator on a 35 mm DIN rail and through angle neutral buses, as well as directly on the board panel. When connecting copper multi-core wires to the buses, it is recommended to terminate them with ferrules-sleeves. Made of brass.

ShNI buses with an insulator are intended for electrical and mechanical connection of neutral, protective and phase conductors. Structurally, the SHNI buses are made of a brass bus mounted on a plastic insulator or in an insulator made of self-extinguishing plastic.

Rated voltage 400 V.

Rated insulation voltage 500 V.

Normal operating conditions for buses are:

- ambient temperature +40°C to +50°C;
- maximum operating temperature +85°C;
- the average value of the relative humidity is not more than 90%.

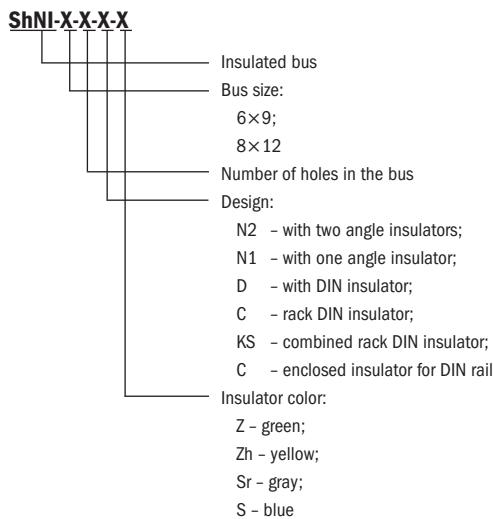

Neutral N/PE buses with nickel plating

Nickel-plated buses and screws allow simultaneous connection of copper and aluminum conductors of different cross-sections.

Enclosed busbars (cross-modules) ShNK

High-quality.

They are used in the assembly of switchboard equipment to connect the neutral wire (zero working bus), ground wire and phase conductors.

Installation methods:

- on a 35 mm mounting DIN rail;
- onto the panel with two screws.

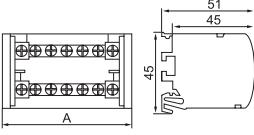

Each bus is separately insulated.

Cross-modules are manufactured with two or four buses, rated for currents up to 100 and 125 A.

DIN rail switchgears RBD

The switchgears RBD are designed to be used as a terminal clamp when connecting several conductors of a smaller cross-section to a conductor with a larger cross-section, to create ordered distribution systems in cabinets, to organize the main grounding bus. They are designed for mounting on a DIN-rail or on a mounting panel both in power cabinets and in apartment distribution boards, for operation in networks with voltages up to 1000 V and frequency of 50 Hz at an ambient temperature of -40 to $+70^{\circ}\text{C}$. High-quality. The enclosure is made of non-combustible plastic.

Installation methods:

- on a 35 mm DIN mounting rail,
- onto the panel board with two screws.

Bridging bars

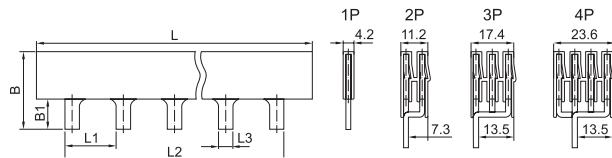

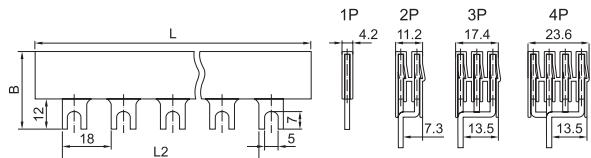

They are used for convenient and safe connection of groups: MCB, RCCB, RCBO, switch-disconnectors. Buses with a pitch of 18 mm are intended for switching equipment with a width that is a multiple of one module, buses with a pitch of 27 mm are intended for switching products with a width that is a multiple of one and a half modules. Buses designed for a rated current of 100 A can be used with a rated current of 125 A if the input circuit breaker is connected in the center. Side plugs are available for 1.5-module buses.

Modular input terminal KVM

Input terminals for modular equipment IEK® are designed to connect large conductors to modular equipment, create loop-through connections of groups of circuit breakers using a round cable.

The screw clamp is made of brass, the material of the current-carrying part of the terminals is copper with anti-corrosion coating.

Advantages of the input terminals for IEK® modular equipment:

- The flat busbar contact of the input terminal creates a large contact surface with the busbar contact.
- Galvanic coating of contacts ensures durability of connections.
- Convenient power supply to the connecting busbars and terminal clamps of modular devices.

Name	Rated current, A	Maximum torque, N/m	Nominal connecting capacity, mm ²	Color	Article

Input terminal for modular equipment KVM 4-25 mm (direct input)	100	2.5	4.25	grey	YKVM-4-25-F

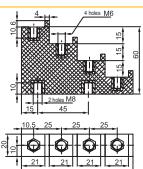

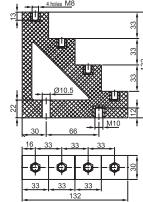

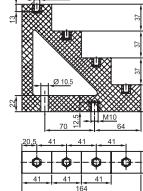

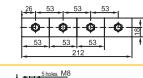

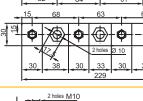

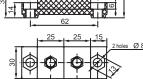

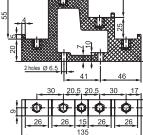

* It is possible to use buses for currents of 125 A if the input device is connected in the center.

Step bus insulators

Step insulators IEK® are designed for rigid attachment and insulation of busbars inside electrical panels, busbar bridges and other equipment.

Insulators guarantee the absence of breakdowns between the buses and can be used in electrical equipment of direct and alternating current with a frequency of 50 Hz and voltage up to 1000 V.

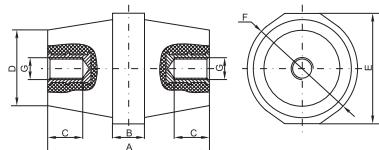

The insulator enclosure is made of a special, mechanically resistant, non-combustible polymer with high electrical resistance.

Bus insulators SM

Bus insulators are used for fixing current-carrying buses inside power cabinets and assemblies in order to fix and isolate current-carrying parts from the enclosure and assembly panels with the subsequent connection of power conductors to distribute electricity inside the switchboard.

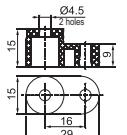

The insulator is fixed on one side with a bolt to the mounting panel or enclosure, on the other side the bus bar is attached to the insulator. Each bus is installed on at least two insulators (at the ends of the bus), and it is also possible to install intermediate insulators (depending on the installation scheme and the length of the bus).

Cable clamp for C-profile

Designed to create orderly systems for distributing conductors in electrical panels and holding wires using a rail with a C-shaped section, for fastening the cable on mounting traverses and cable rails with an EMC contact. Helps relieve heavy wire weight from connections and contacts, providing additional assembly reliability. It is also suitable for attaching wires to the corresponding profile of cable support systems and trays.

Structurally, the clamps are made of galvanized steel with an installed plastic holder made of self-extinguishing plastic.

Plastic pocket for documentation

It is designed for storing technical documentation in cabinets of low-voltage switchgear for various purposes.

Design features:

- possibility of installation on a door or cabinet panel.
- installation method: adhesive layer (double-sided tape).
- material: plastic, which does not support combustion (test with a red-hot thread at 650°C).
- wide range of operating temperatures: from -20°C to + 60°C.
- color: gray RAL7035.

Convection heaters on DIN rail

The heater on DIN rail is designed to heat the air inside electrical cabinets.

The convection airflow it generates prevents the formation of low temperature areas and protects electrical components from condensation and freezing due to temperature changes, as well as from corrosion of metal elements of active equipment.

Advantages

- Compact heaters are made of anodized aluminum profile and have a self-regulating function, which avoids overheating and maintains fire safety.
- The dynamic air heating system is most effective during long-term operation and allows significant savings in energy consumption.
- The optimal shape of the radiator increases the efficiency of heat transfer by increasing the convection speed while maintaining small dimensions.
- Extended heater life with high reliability.
- Wide range of operating AC and DC voltage.
- Wide product range.

Specifications

Heater	Aluminium alloy
Coating	anodized
Plastic	polyamide 66 UL94 VO (flame retardant)
Enclosure color	black (convection), silver (with fan)
Heating element	self-regulating PTC thermistor (temperature limiting)
Degree of protection	IP20
Protection class	I (protective grounding) – convection, II (with protective insulation) – with a fan
Operating voltage, V	AC/DC 120–240* (convection), AC 230 (with a fan)
Storage and operating temperature, °C	from –60 to +75
Operating / storage humidity	Max. 90% (non-condensing)
Tightening torque of screw terminals, N·m	0.8
Cross-section of the connected conductor, mm ²	0.5–1.5 multi-core wire (with ferrule) 0.5–2.5 rigid wire
Service life not less, years	5

* – When operating on voltages below AC/DC 140 V, the heating power is reduced by 10%

Design features

The dynamic air heating system is most effective during long-term operation and allows significant savings in energy consumption.

An additionally integrated axial fan increases the rate of heat dissipation.

Metal bracket for DIN rail mounting improves operational reliability.

Increased safety, due to the double protective insulation of the enclosure, the surface temperature is reduced to 80°C (excluding the upper grill).

Spring clips make installation as easy and fast as possible.

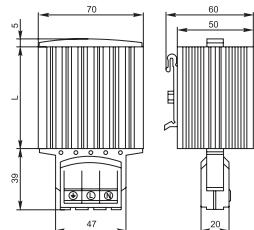

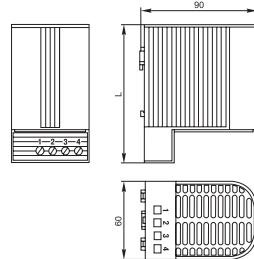

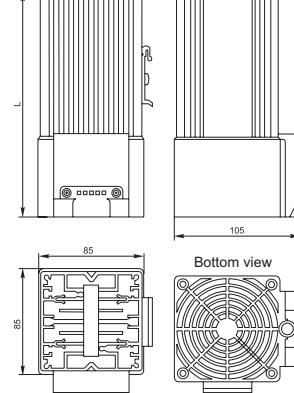

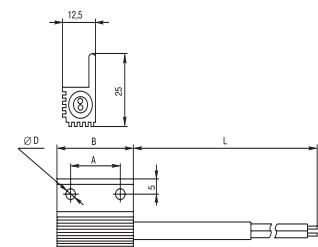

Protective grill prevents accidental ingress of foreign objects inside the enclosure and prevents personnel injury in case of touching.

The increased surface area of the heater improves heat transfer and allows significant energy savings.

Additional leads for connecting conductors provide the possibility of using it in various functional diagrams.

	Mini heater 13 W IP54 IEK	13	3.0	6.0	60	0.04	YCE-RC-13-20

* At an ambient temperature of 20°C.

** Fan capacity 45 m³/h at 50 Hz; service life 50,000 h at +25°C.

Installation Recommendations

- Low power heaters are recommended to be installed at the bottom of the cabinet.
- It is not recommended to place active equipment closer than 10 cm from the heater.
- It is not recommended to place bulky equipment above the heater that can interfere with natural convection.
- It is not recommended to place highly heat-sensitive equipment above the heater.
- When installing multiple heaters, it is recommended to use a parallel connection.
- The heaters are recommended to be installed vertically.

Heater power selection

The choice of the power of the heater is made according to the formula:

$$P = S \cdot k \cdot (T_{req. min} - T_{amb. min}) - P_{tot},$$

where:

S is the estimated surface area of the heated cabinet, m^2 .

The surface area of the heated cabinet depends on the installation scheme; different formulas apply for different options:

Cabinet location	Formula for calculating S, m^2
Freestanding cabinet, free access	$S = 1,8 \cdot H \cdot (W+D) + 1,4 \cdot W \cdot D$
Freestanding cabinet against the wall	$S = 1,4 \cdot W \cdot (H+D) + 1,8 \cdot H \cdot D$
The cabinet is at the end of the row, free access	$S = 1,4 \cdot D \cdot (H+W) + 1,8 \cdot H \cdot D$
The cabinet is at the end of the row near the wall	$S = 1,4 \cdot H \cdot (D+W) + 1,4 \cdot D \cdot W$
The enclosure is in the middle of the row, free access	$S = 1,8 \cdot H \cdot W + 1,4 \cdot D \cdot W + D \cdot H$
The cabinet is in the middle of the row near the wall	$S = 1,4 \cdot W \cdot (H+D) + D \cdot H$
The cabinet is in the middle of the row near the wall, with a visor	$S = 1,4 \cdot W \cdot H + 0,7 \cdot D \cdot W + D \cdot H$

B – cabinet height, m; W – cabinet width, m; D – cabinet depth, m.

Note: the choice of heaters is made in such a way that the power of the heater (the total power of several heaters) is higher than the calculated value.

Recommendation: when installing the cabinet in an open space, it is necessary to use a heater with a capacity of twice the calculated one.

k is the heat transfer coefficient ($W/K \cdot m^2$), depending on the material of the shell from which the cabinet is made. The reference values of this coefficient for various materials are shown in the table below.

P_{gen.} is the heat power (W), total released by the equipment installed inside the cabinet (active and passive equipment: microprocessor technology, semiconductor technology, automatic devices, contactors and other electrical devices, as well as wires through which electric current flows).

T_{req. min} – T_{amb. min} – temperature difference ($^{\circ}C$) between the minimum required temperature inside the cabinet **T_{req. min}** and minimum ambient temperature around the cabinet **T_{amb. min}**.

Cabinet material	Heat transfer coefficient, $W/K \cdot m^2$
Painted sheet steel	5.5
Stainless steel sheet	4.5
Aluminum	12
Double aluminum	4.5
Polycarbonate, polyester	3.5

Fans

Filtered fans are designed for air cooling of active equipment inside electrical cabinets. The airflow they generate prevents hot areas from forming and protects electrical components from overheating to keep installed equipment running smoothly.

Advantages

- Progressive air supply system combined with low noise level.
- High resistance to atmospheric and temperature influences, as well as to UV radiation.
- Compactness and aesthetics with a small installation depth.
- The optimal and efficient solution for cooling cabinets while maintaining cost efficiency.
- Functional design with easy maintenance and installation.
- Optimum throughput of the filter material.
- Easy to change filter media without the use of tools.

Specifications

Installation type	flush-mounting
Enclosure material:	
fan	aluminum
filter	ABS plastic UL94 V0 (self-extinguishing)
Operating voltage	AC 230 V (50 Hz)
Degree of protection	IP55*
Filter class	G4
Protection class	I (protective conductor)
Filtration degree	94%
Operating temperature	10 to 70°C
Storage temperature	40 to 70°C
Operating / storage humidity	Max. 90% (non-condensing)
Enclosure color	Gray RAL 7035
Service life, not less than hours	50 000 at +25°C
Climatic modification	N2.1
Cross-section of the connected conductor, mm ²	0.5-1.5 multi-core wire (with ferrule) 0.5-2.5 rigid wire

* – The degree of protection is ensured after installing a fan with a filter in an electrical or telecommunication cabinet.

Design features

The protective grill of increased functionality provides reliable protection against the ingress of vertically falling water drops and dust, and reduces the intensity of contamination of the filter material.

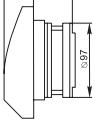

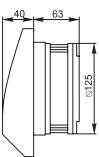

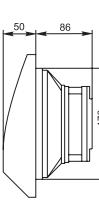

The direction of the cooling air can be easily changed by turning the fan over.

Effective prevention of water and dust from entering the interior of the cabinet due to the polyurethane sealant.

Assortment

Name	Air supply at free discharge, m ³ /h	Air supply with exhaust filter, m ³ /h	Consumed power, W	Consumed current, mA	Noise level, dB	Mounting opening, mm	Size for mount. holes, mm	Weight, kg	Article

Dimensions	Name			Mounting opening A, mm	Mounting depth, mm	Mounting opening, mm	Weight, kg	Article	
	Filter with a protective case 97×97mm for a fan 21 m ³ /h			109	16	97	0.3	YCE-EF-021-55	
	Filter with a protective case 125×125mm for a fan 55 m ³ /h			137	16	125	0.4	YCE-EF-055-55	
	Filter with a protective case 176×176 mm for a fan 102 m ³ /h			188	16	176	0.67	YCE-EF-102-55	

Installation Recommendations

- When installing a fan for forced ventilation, an exhaust filter must be used to remove the forced air from the cabinet.
- It is recommended to install the fans in such a way that cold air is blown into the bottom of the cabinet and passes through the outlet filter at the top, thereby promoting natural convection flow.
- When installing a filter outlet grill with filter material, the actual performance of the fan decreases. The decrease in air flow can be partially compensated by installing an exhaust filter of a larger size range than the fan.

Calculating the required fan airflow

The required air flow of the fan is calculated using the formula:

$$V = f \cdot P_{\text{tot}} / (T_{\text{req. max}} - T_{\text{amb. max}}), (\text{m}^3/\text{h}),$$

where:

f is the coefficient of the height of the terrain above sea level. The reference values of the coefficient are shown in the table below;

P_{gen.} is the heat power (W), total released by the equipment installed inside the cabinet (active and passive equipment: microprocessor technology, semiconductor technology, automatic devices, contactors and other electrical devices, as well as wires through which electric current flows).

T_{req. max} – T_{amb. max} – temperature difference (°C) between the maximum required temperature inside the cabinet **T_{req. max}** and maximum ambient temperature around the cabinet **T_{amb. max}**.

The minimum required temperature inside the cabinet is set as the maximum value between the dew point temperature of the area and the minimum operating temperature of the installed equipment.

Height Factor Reference Values

Height above sea level, m	f, m ³ · K/W · h
0-100	3.1
100-250	3.2
250-500	3.3
500-750	3.4
750-1000	3.5

Note:

the choice of heaters is made in such a way that the power of the heater (the total power of several heaters) is higher than the calculated value.

Recommendation: when installing the cabinet in an open space, it is necessary to use a heater with a capacity of twice the calculated one.

Control devices

Thermostats and hygrostats are designed to control fans and heaters, they are paired with a heater (NC) or fan (NO).

A thermostat with a normally closed NC contact is used to regulate the heater and cut off the load current when the temperature rises above the set value.

A thermostat with a normally open NO contact is used to turn on cooling devices (fans), as well as signaling devices and sensors when the temperature rises above the set value.

Dual circuit thermostats are used for independent control circuits.

The hygrostat is used to turn on the heater when the humidity exceeds the set value.

Advantages

- Wide range of temperature and humidity control with low error.
- Easy to install and configure.
- High switching capacity.
- Significant resource of work.
- Wide product range.

Specifications

Installation type	DIN rail
Sensing element:	
thermostat	thermobimetallic plate
hygrostat	polyamide fibers
Contact type	snap contact
Enclosure material	polyamide 66 UL94 V0, self-extinguishing
Enclosure color	Gray RAL 7035
